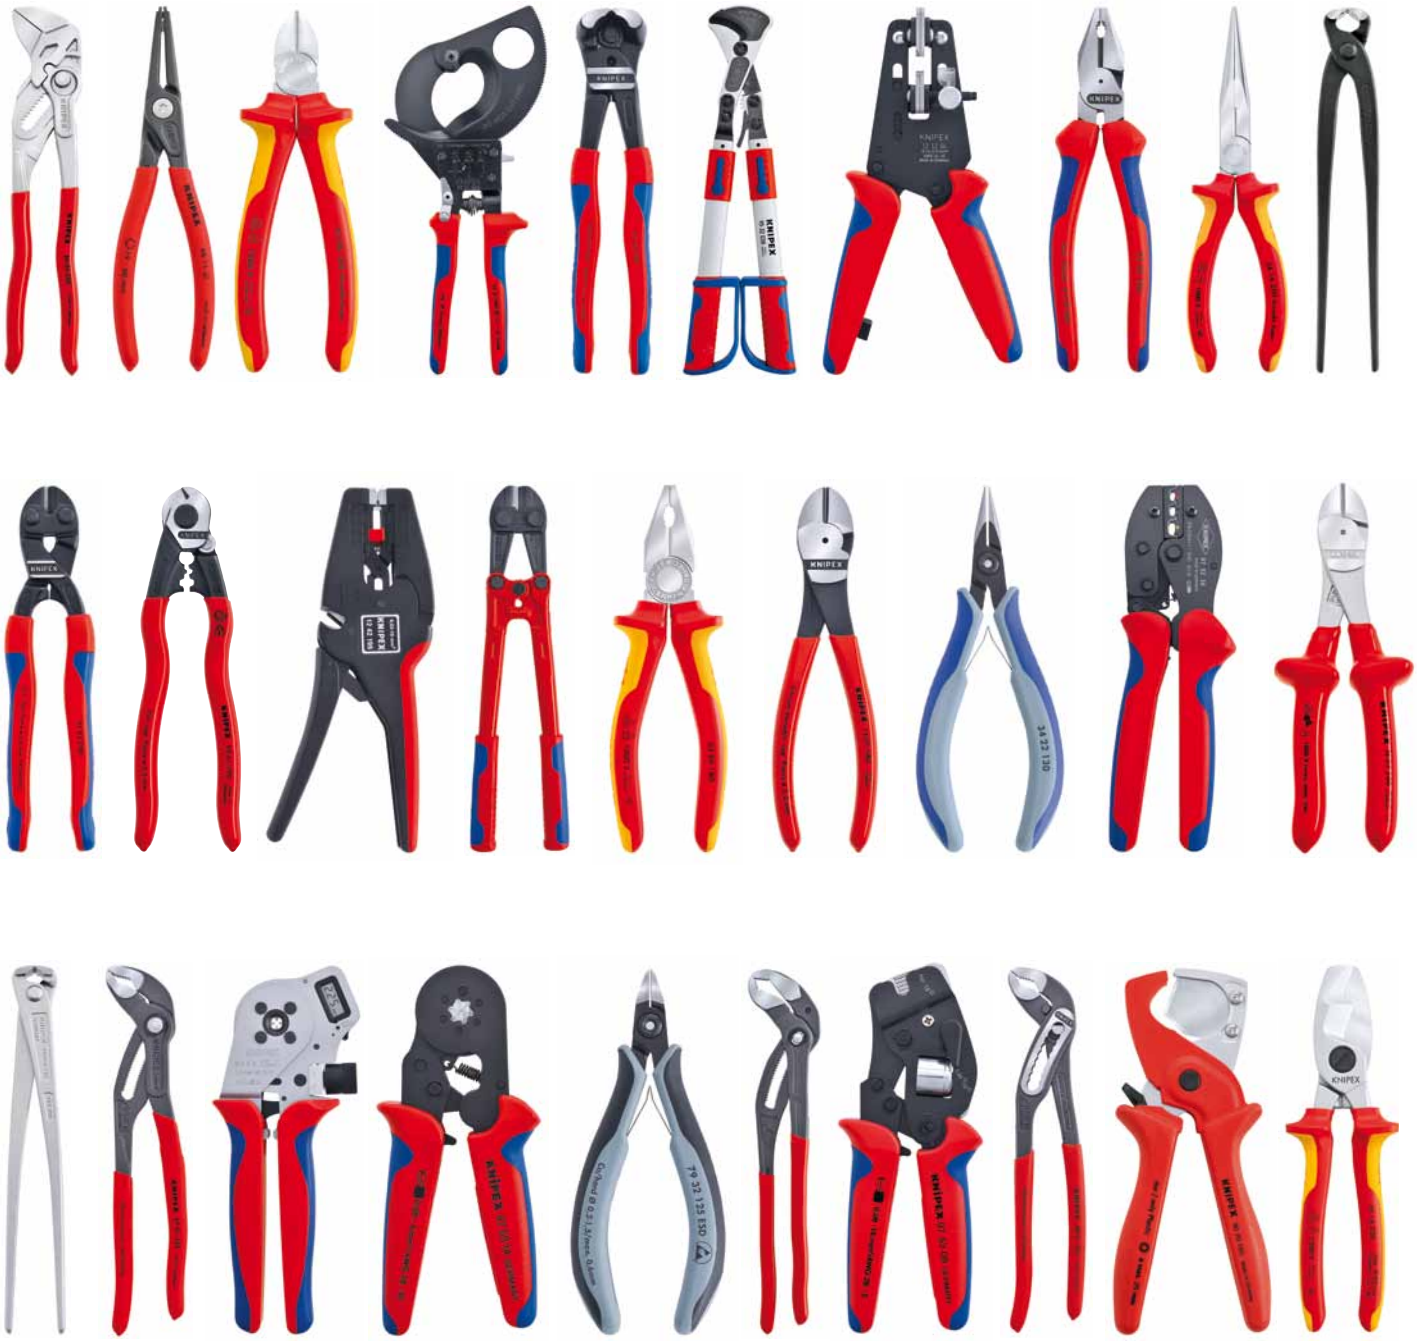
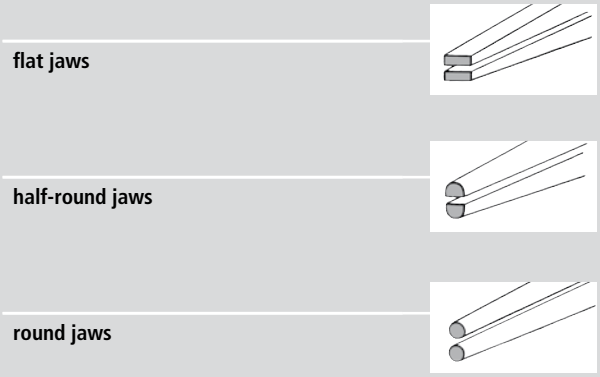
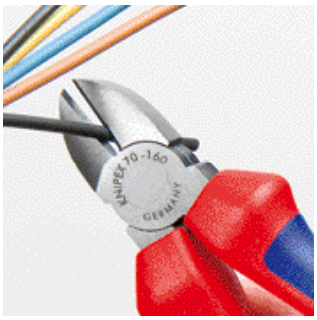
GENERAL CATALOG 2013



PLIERS ABC TECHNICAL BASICS

BASIC SHAPES OF THE JAWS

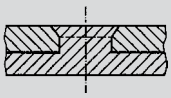




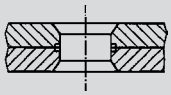
Cutting Pliers
for cutting or nipping (diagonal, center and end cutters, carpenters' pincers etc.)

Gripping Pliers
(flat-, long-nose and water pump pliers etc.)

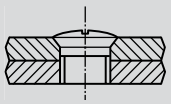
JOINT CONNECTIONS



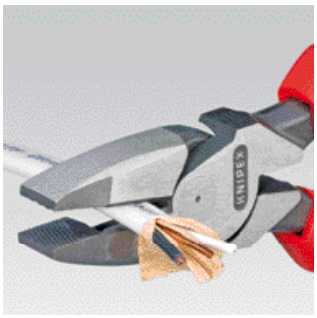
Forged-in joint axle
The rivet is part of one handle (forged from one piece)
- high stability to withstand highest strain
- long service life



Joint with inserted rivet
A proved, sturdy and precise rivet connection for all standard pliers.



Bolted joint
For particularly demanding requirements in terms of precision and smooth operation, e.g. in circlip pliers and cable shears (even the finest multi-stranded conductors have to be cut cleanly).



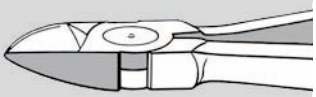
Combined Pliers
for cutting and gripping (combination, stork beak and radio pliers etc.)

Special Pliers
for special applications, e.g. notching or punching different types of materials (sheet-metal nibbler, tile nibbling pincers etc.)

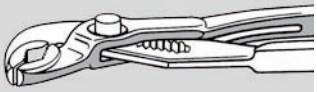
TYPES OF JOINTS

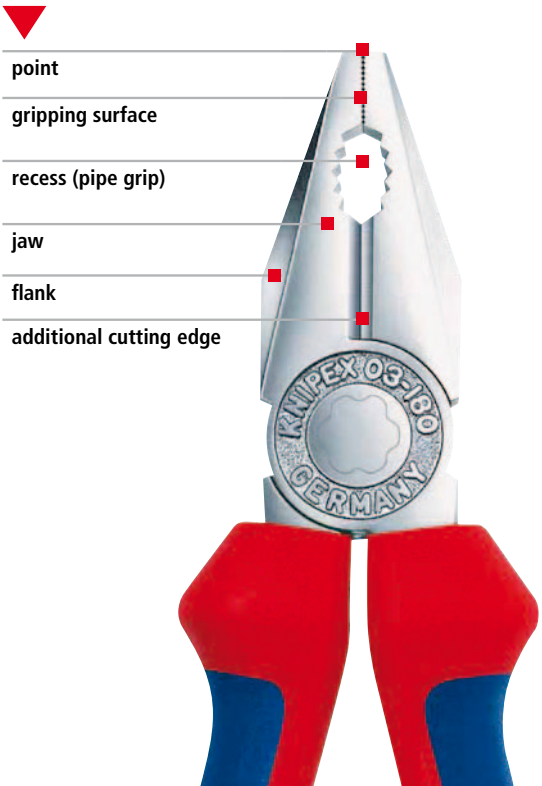
Lap joint
The two pliers halves lie on top of each other but are not milled out.

Single joint
Half the thickness in each pliers handle is milled away in the joint area so that both handles can be laid into each other.



Box joint
One handle on the pliers is slit. The other handle is pushed through this slot. This joint connection can withstand a high level of load and strain because the joint bolt is supported on both sides and the inside handle is guided on both sides.





CUTTING CAPACITIES

The maximum values indicated always stay for the performance limit under the most favourable cutting conditions, when the wire is placed as near as possible to the joint.

Safety instruction
Each tool should only be used for its specified purpose. When using cutting pliers: beware of wire ends flying off. Wear protective goggles and, if needed, gloves. Be aware of those around you!
Only handles marked with the symbol 1000 V are insulated.

HOW EVERYTHING BEGAN – AND A SIMPLE PRINCIPLE

1882 Carl Gustav Putsch set up his own small forge shop in Cronenberg (now a part of Wuppertal).

1922 Carl Putsch takes over management. The company develops into an industrial firm.

1942 KNIPEX, the brand, is created and registered.

1954 Karl Putsch (photo left), the grandson of the company founder, takes over management of the family-owned company. Numerous innovations and modern production technology characterise the development.

1987 Ralf Putsch joins the company. International sales are seriously expanded. Other tool manufacturers become part of the KNIPEX Group.

Carl Gustav Putsch wanted to stand on his own two feet after completing his apprenticeship as blacksmith with his father. He therefore set up his own business in 1882 and forged carpenters' and farriers' pincers with two journeymen, 60 pieces per day. The other processes were also carried out in careful manual labour. The quality was sought after, the small enterprise grew.

The next generations were able to build continuously on these foundations. We have retained an independent family-owned company up to the present day. A lot has changed since the first years. Over time, the workshop turned into a factory with modern machinery and continuously improving technology. New types of pliers and pioneering innovations were added. The number of supplied countries grew steadily.

However, our fundamental principle has stayed in place: remain faithful to a product group, concentrate all strengths on it and be „simply the best" in pliers. Don't get side-tracked, instead create more performance and quality in a single segment. This is what KNIPEX stands for as today's leading brand in pliers.

KNIPEX
WORLD FAMOUS PLIERS AND CUTTERS

FOR WHOM WE MAKE PLIERS

They are constantly in our mind: People who work with tools professionally. Who need to be able to rely on their tools, even when the going gets tough. Who expect their tools to last a long time. In other words: Users who are demanding in every respect and who want only the best.

We offer these users a range of around 1,000 different pliers. With this choice we can provide exactly the right tool for every application - and always in a suitable design and size.

Because the verdict of the professionals is our benchmark, we are always looking for their feedback. About how they work with their pliers and what's important to them, so that we can understand precisely and in detail what matters to them.

Paramount is to know what makes their work easier, quicker and safer. That is, the subject of ergonomics, adapting working appliances to their users. Despite high performance, tools should never stress a user more than necessary. Here, for example, the good design of pliers handles is not the only criterion. We always find new ways of saving strength and relieving the whole hand-arm system.

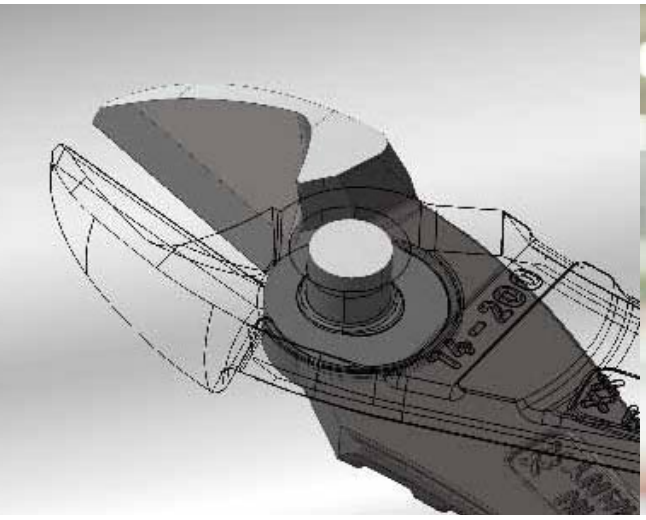
QUALITY IN EVERY DETAIL



Sometimes we give our pliers a really hard time. We try to destroy them to find out what makes them good and long-lasting. Because we don't want to leave anything to chance, we take a long, careful look.

Many trials, for example, have shown us that high-leverage diagonal cutters for very hard wire should be alloyed at best with 0.8% carbon and certain defined parts of chromium and vanadium.

Correctly hardened, this steel guarantees optimum cutting performance and service life. That's why we use it for our pliers – even if it has to be produced especially for us, costs more and is hard to process. But our high product demands require this.

The rivet of the high-leverage diagonal cutter also has to stand up to a lot of stress. That's why we literally give it backup: we forge it straight onto the pliers. This means extra effort – we have to precision mill the rivet to a few hundredth millimeters. Satisfied users are worth this effort.

And then there are, no less important: the angles, the sharpness, the hardness, the toughness of the cutting edges. The precision and smooth movement of the joint. The handle design and the finish: we keep reviewing these subjects, we research, test and improve.

MADE IN WUPPERTAL, GERMANY

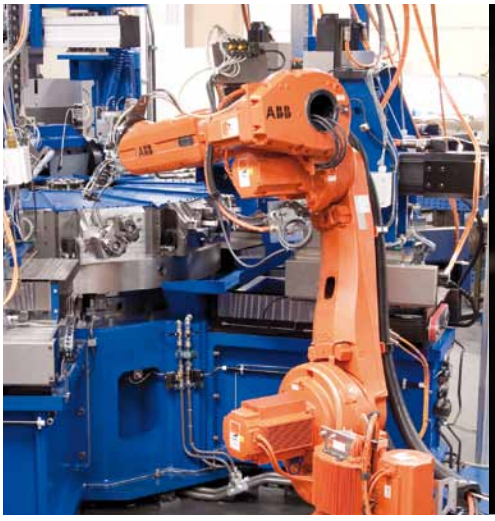
A lot has to come together so that we can make the best pliers.
First of all, the special material. Then: modern processing methods and machines. We want to work with high precision and efficiently at all times.

The machines we require for our special needs are not always available on the market. Then we construct these ourselves. Our mechanical engineers come up with state-of-the-art solutions even for tricky tasks.

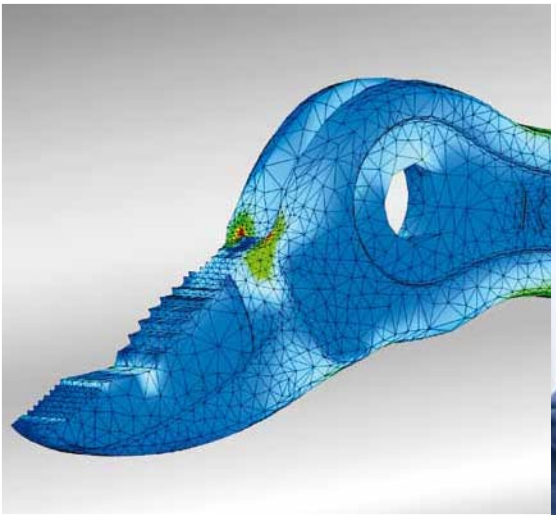
And last but not least: our employees. With their comprehensive experience, their knowledge and skills they make sure that everything turns out precisely as our customers expect. So that we can keep the KNIPEX promise.

Our pliers run through many production steps which are all carefully coordinated. From forging to machining, hardening, surface finishing and all the way to packing, these steps are all carried out under the one roof. This means that we can have a direct and complete influence on how our products are created.

The short distances allow us to respond quickly and implement improvements immediately.



THE THINK TANK



When we have achieved something we are happy – but we don't stop there. For us, better is the enemy of the good. And we like to be the first to have the good ideas for better pliers.

We continuously work on new products and product advantages which offer our users tangible added value. For example by saving handforce when cutting or adjusting pliers for gripping quicker and with more precision. Or you can work without a heavy tool because a more compact one can do the same job.

No matter whether it's a small improvement or a totally new idea: everything is meticulously thought out and designed with state-of-the-art software. New models are then put through the acid test – with the help of computer simulations in the test lab and in user testing. The results are then used to further optimise the product, it is re-tested and finally released for production.

By the time they're on the market our pliers have already come a long, hard way.

OUR CUSTOMERS

Reliably, confidently and long-term – this is how we wish to collaborate with our customers. We have been doing precisely this for decades with many of them. We offer high quality, performance, good service and contact partners who know what it's all about. We want working with us to be easy and pleasant.

Our brand is known and appreciated by consumers. We offer various support for the sale of our products. We visit users together with our distributors to present our tools. We train our partners' field salesforce because a lot can be said about our pliers which the salesperson can use as convincing arguments.

Our understanding of partnership also means that we do not sell directly to end users. And there are no exceptions.

Today, customers in more than 100 countries bank on our products. We reach them via a constantly enlarging, worldwide network of agencies, our own subsidiaries and importers. By observing the many markets we can gain insights and discover important trends, which will be beneficial to the up-to-dateness and competence of our range. Our customers also benefit from this.

OUR VALUES – OUR EMPLOYEES

We want to be successful and do a lot to achieve this. But we don't want economic success at any price and not at the expense of values which are important to us.

Our aspirations are to act and operate sustainably. The longevity of our products is only one aspect of many.

We feel closely linked with our location. That is why we are particularly aware that we have a responsibility towards our environment and society – and thereby our future generations. We want to treat resources carefully and not burden nature more than absolutely necessary.

We engage ourselves in many ways in our sphere, in particular in the sectors of education, social policy and culture.

Our employees are particularly important to us. They provide the basis for our success with their knowledge and skills, their commitment and ideas. We train them very thoroughly and support them when they want to develop themselves and learn something new. We put emphasis on a good an fair cooperation and know that we can only attain our high targets jointly.

SPECIAL TOOLS FOR PHOTOVOLTAICS

ALL WORK STEPS WELL CO-ORDINATED FOR BEST RESULTS

There is a steadily increase of electrical power produced by photovoltaic plants (PV systems). The output from this environmentally friendly source of energy rises each year by about 20% worldwide. However, the share in the total power generation is still below 0.3% worldwide, which means there is still rich potential for growth. This makes photovoltaic a profitable sphere of activities for trade and for electrical contractors.

The photovoltaic tools from KNIPEX, customized for cutting, stripping and crimping the special photovoltaic cables and connectors, offer professional and reliable work results and ensure that the relevant requirements, such as e.g. Ral GZ 966, are met.

The requirements for a technically perfect installation of the photovoltaic systems are very high. It is a demanding task to create an electrically efficient and constantly reliable connection in combination with high mechanical requirements.

Tool Case for Photovoltaics

Article No. 97 91 01:
all tools required for assembly in one case equipped with crimping dies for standard solar cable connectors

SPECIAL PHOTOVOLTAIC RANGE FROM KNIPEX

Cut effected with a Cable Shears: easy, clean cut without any deformation of the cable.

High demands in terms of results require the use of high-quality special tools also. These must be adapted precisely to suit systems from various manufacturers.

As the systems are not compatible with each other, each type of connector requires a set of individual crimping dies. The range is completed by locators to support quick, easy and precise work.

High Leverage Combination Pliers

ISO 5746

Easier cutting. Powerful gripping, bending and pulling.

- 35% less effort required compared to conventional combination pliers
- easier work due to high leverage design
- with cutting edges (hardness approx. 63 HRC) for soft, hard, piano and ACSR wire
- long cutting edges for thicker cables
- with gripping zones for flat and round material, suitable for versatile use
- High-grade special tool steel; forged, oil-hardened

Lineman's Pliers New England Style

ISO 5746 ASME B107.20

- heavy duty
- high transmission ratio for easy cutting
- high leverage design requires 40% less effort compared to conventional combination pliers
- effective cross-hatched knurled gripping zone in the jaws – for strong gripping and pulling
- additional serrated gripping zone below the articulated joint for powerful leverage
- with cutting edges for soft, hard and ACSR wire
- cutting edge hardness approx. 64 HRC
- Vanadium electric steel; forged, oil-hardened

11

Insulation Strippers

- for single, multiple and fine-stranded conductors with plastic or rubber insulation of a maximum 13/64" diameter. Also suitable for 7 AWG wire.
- easy adjustment to the required diameter of solid or stranded wire with knurled screw and lock nut
- Special tool steel; forged, oil-hardened

11 01 160

11 02 160

11 08 160

11 9

Electronics Wire Stripper

11 92 140

- for single, multiple and fine-stranded cables up to 1/32" dia. with plastic or rubber insulation
- easy adjustment to the required diameter of solid or stranded wire with knurled screw and lock nut
- with opening spring
- the mirror polish, together with a fine film of oil, offer the best possible rust protection – no circuit faults caused by peeling chrome from plated tools
- Special tool steel; forged, oil-hardened

Product Number	↔ inch	↔ mm		Head	Handles	Stripping capacities Ø inch	Ø mm	AWG	Ounces

12

Insulation Stripper with adapted blades

12 21 180

- with replaceable blades for 4 or 6 different conductor cross-sections
- leaves wire undamaged thanks to precision-ground blade shapes, even multi-stranded conductors are stripped gently
- during stripping, the wire is held firmly by clamping jaws
- with length stop for constant stripping length during repetitive work
- pliers body: aluminium
- blade: Special tool steel; oil-hardened

12 21 180: wire cross-sections in mm²

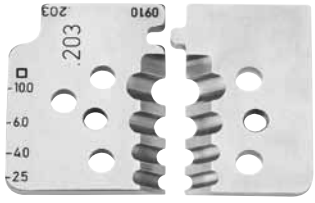
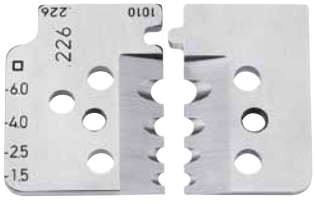
maximum cable cross-section (in mm²) per profile:

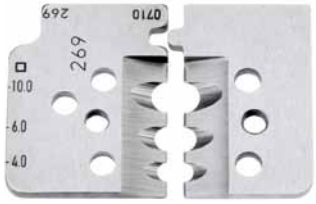
12 12 06



12 12 10



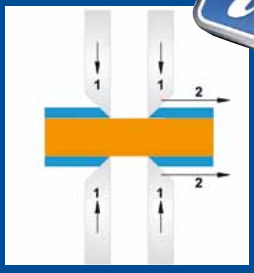
12 12 11



12 12 12

Precise and Reliable

Two pairs of blades (1) cut the insulation completely.
Then the blade pairs move apart, and thus the insulation is removed form-fit (2).
The pliers opens automatically after the stripping procedure.



- form-fit stripping of both standard and difficult-to-remove insulating materials such as PTFE, silicone, Radox®, Kapton® and rubber including multi-layer insulations
- blades are shaped precisely to the respective conductor cross-section
- an adjustable length stop is perfect for use when cutting the same stripping lengths during repetitive work
- pliers body: steel
- blades: Special tool steel; oil-hardened

12 12 02
with additional cable guide for exact positioning of the conductor in the stripping area of the blades

12 12 11 for solar cables
specially adapted to multi-layered and RADOX® insulation; with additional cable support for multi-layer insulated conductors in the stripping profiles

Kapton® is a registered trademark of E. I. du Pont de Nemours and Company

Principle of operation with shaped blades

Neat and precise stripping with a circular cut around the conductor.
Perfect for working with conductors which must be stripped precisely.

For use when working with PTFE, RADOX® and multi-layer insulation.

12 12 02 with cable guide and length stop

Precise cutting of the insulation

The precise shape of the blades leads to perfect stripping

Automatic stripping of the insulation

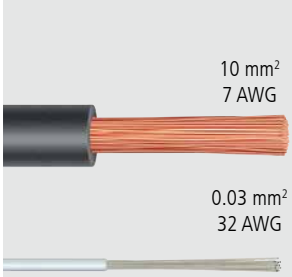
12
40/50

Self-Adjusting Insulation Strippers

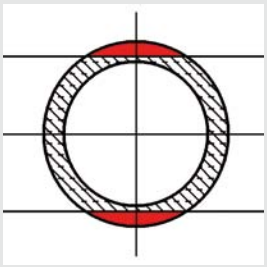
12 40 200

- for single, multiple and fine-stranded conductors with standard plastic or rubber insulation
- adjusts automatically to the respective cable cross-section which prevents damage to the conductor
- cutting depth can be adjusted for different insulation materials
- with wire cutter for copper and aluminium wires, multi-stranded up to 7 AWG and single-stranded up to 10 AWG
- smoothly operating mechanism
- replaceable blade and plastic clamping jaws
- light weight
- body: fiberglass-reinforced
- blade: Special tool steel; oil-hardened

12 40 200
for thin ribbon cables up to 7 AWG width
in a single pass



STRAIGHT BLADE



Wire cutter for multi-stranded wire cables up to 10.0 mm² / 7 AWG

KNIPEX MultiStrip 10

Automatic Insulation Stripper

PATENTED

12 42 195

Patented mechanics
The cutting capability of the stripping blade adapts to the diameter and thickness of all standard insulating materials. There is no need for manual adjustment like other tools.

Stripping without readjustment from 7 to 32 AWG

- automatic adjustment to single, multi- and fine-stranded conductors with standard insulation. Range of 7 to 32 AWG.
- no manual adjustment required; no damage to the conductors
- steel clamping jaws with integrated cutting edges hold the cable and prevent slipping
- with wire cutter for copper and aluminium conductors, multi-stranded up to 7 AWG and single-stranded up to 10 AWG
- light weight
- replaceable blades and length stop
- handle with soft-plastic zone for a steady grip
- body: plastic, fiberglass-reinforced
- blade: Special tool steel; oil-hardened

Mode of operation of straight cutters
Models 12 40 200 and 12 42 195

An incision is made in the red area only.

Not suitable for highly-flexible or armored insulation materials or for multi-layered insulation.

Wire cutter for multiple stranded wire cables up to 10.0 mm² / 7 AWG

Steel restrain jaws with cutting edges avoid skidding of the cable

Precise stripping from 7 - 32 AWG without readjustment

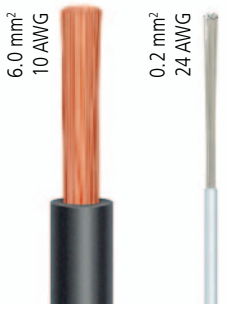
62

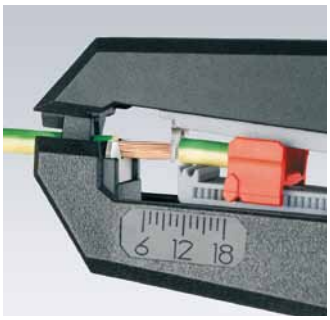
Automatic Insulation Stripper

12 62 180

- compact standard tool at a favorable price for all current cable cross-sections and insulating materials
- for single, multiple and fine-stranded cables of 10 AWG to 24 AWG with standard insulation
- adapts automatically to the respective cable cross-section preventing damage to the conductor
- ergonomic and lightweight
- narrow head style for use in confined areas
- with wire cutter for copper and aluminium wires up to 14 AWG
- with adjustable length stop from 15/64" - 23/32" for stripping the same lengths during repetitive work
- body: plastic, fiberglass-reinforced
- blades: Special tool steel; oil-hardened, interchangeable



Wire cutter up to 2.5 mm² / 14 AWG



Precise stripping from 0.2 up to 6.0 mm² / AWG 10 to AWG 24

Installation Pliers

- multifunctional pliers for the electrical installation; for cutting cable, stripping and crimping end sleeves (ferrules), to grip flat and round material, for bending, deburring
- 6 functions in one pair of pliers
- smooth surfaces near the tips grip single conductors without damaging them; serrated gripping surfaces and pipe grip for gripping flat and round material
- clear-cut outside edge on the jaw for working on flush-mounted junction boxes and deburring feed-through holes
- stripping holes for 12 + 14 AWG
- crimp die for end sleeves (ferrules) 12 - 20 AWG
- cable shears with (induction-hardened) precision cutting edges for copper and aluminium cables up to 19/32" dia.
- slim dimensions for easy access
- bolted joint: precise, zero backlash operation of pliers
- High-grade special tool steel; forged, oil-hardened

Round Nose Pliers with cutting edge

(Jewelers' Pliers)

ISO 5743

19 01 130

- for fine wire and working with jewelery
- ideal for cutting and bending work, also in electronics
- for bending wire loops
- precision-ground smooth, round jaws with fine, pointed tips
- cutting edges additionally hardened, cutting edge hardness approx. 60 HRC
- Vanadium electric steel; forged, oil-hardened

Precision Electronics Gripping Pliers

ISO 9655

34 12 130

34 22 130

34 32 130

The subtle difference
KNIPEX precision electronics pliers are made of high-quality ball bearing steel and processed with the highest degree of care. Each movement is gentle and even and there is no backlash. Each work step proceeds reliably and precisely. This makes work much easier for professionals.

- for very precise assembly work, e.g. in electronics and fine mechanics
- for gripping, holding and bending
- smooth gripping surfaces; smooth edges
- approx. 20% lighter than conventional electronics pliers
- bolted joint and carefully manufactured joint surfaces for even, low-friction movement throughout the entire opening range
- double spring for a gentle and even opening
- ergonomically optimized handle covers
- Chrome vanadium ball-bearing steel; forged

Style 1
flat, wide jaws

Style 2
half-round jaws

Style 3
round, pointed jaws

Precision Electronics Gripping Pliers ESD

ISO 9655

34 12 130 ESD

34 22 130 ESD

34 32 130 ESD

ESD pliers (electrostatic discharge)
- electrostatic energy is discharged through the handles in a gradual and controlled manner
- protects components endangered by electrostatic discharge
- in accordance with applicable standards, e.g. IEC TR 61 340-5, DIN EN 61 340-5, SP Method 2472

- for very precise assembly work, e.g. in electronics and fine mechanics
- for gripping, holding and bending
- electrically discharging handles – dissipative
- smooth gripping surfaces; smooth edges
- approx. 20% lighter than conventional electronics pliers
- bolted joint and carefully manufactured joint surfaces for even, low-friction movement throughout the entire opening range
- double spring for a gentle and even opening
- ergonomically optimized handle covers
- Chrome vanadium ball-bearing steel; forged

Electronics Pliers

ISO 9655

- precision pliers for ultra fine assembly work, e.g. in electronics and fine mechanics
- for gripping, holding and bending
- precision box joint
- smooth gripping surfaces
- smooth edges
- low-friction double spring for gentle and even opening
- the polish with a fine film of oil offers effective rust protection – no circuit faults caused by peeling chrome from plated tools
- Special tool steel; forged, oil-hardened

Electronics Pliers ESD

ISO 9655

35 12 115 ESD

35 22 115 ESD

35 42 115 ESD

ESD pliers (electrostatic discharge)
- electrostatic energy is discharged through the handles in a gradual and controlled manner
- protects components endangered by electrostatic discharge
- in accordance with applicable standards, e.g. IEC TR 61 340-5, DIN EN 61 340-5, SP Method 2472

- precision pliers for ultra fine assembly work, e.g. in electronics and fine mechanics
- for gripping, holding and bending
- electrically discharging handles – dissipative
- precision box joint
- smooth gripping surfaces
- smooth edges
- low-friction double spring for gentle and even opening
- the mirror polish together with a fine film of oil offers effective rust protection – no circuit faults caused by peeling chrome from plated tools
- with two-color dual component handles, black/grey
- Special tool steel; forged, oil-hardened

Precision Circlip Pliers

for internal circlips in bore holes

48 11 J2

48 21 J21

Tip-top quality
Easy and reliable assembly: form-fitting inserted and pressed-in tips made of high-density spring steel offer a high level of protection against excessive stress and strain, e.g. when removing rings that are stuck. The large supporting surfaces and the position of the tips make it more difficult for the rings to fly off.

With inserted tips for reliable work

- heavy duty for continuous operation: up to 10 times longer service life than turned tips
- bolted joint: precise, zero backlash operation of pliers
- non-slip plastic coating on the handles
- pliers body: Chrome vanadium electric steel; forged, oil-hardened
- inserted tips: spring steel wire, drawn

Style 1
DIN 5256 C, straight tips

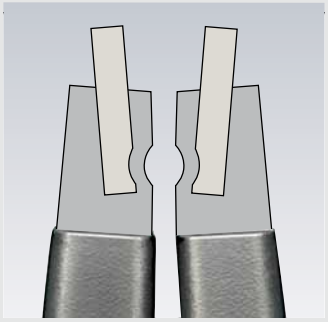
Style 2
DIN 5256 D; 90° angled tips

Pliers Sets
see page 176

Precision and durability
High-density spring steel with a score-free surface is used for the tips. This increases the tips' resistance to dynamic and static strain. The tips are 30% more stable than conventional pliers when subjected to one-off overloading, while still allowing good accessibility during assembly. Subjected to dynamic strain, the tips' resistance capacity is up to 10 times greater! The tips on the Precision Circlip Pliers are non-detachable!

Slim head shape

Sturdy, inserted tips:
made from high-density spring steel



Tight fit through compression

Precision Circlip Pliers

for external circlips on shafts

49 11 A2

Style 1
DIN 5254 A, straight tips

49 21 A21

Style 2
DIN 5254 B; 90° angled tips

With inserted tips for reliable work

- heavy duty for continuous operation: up to 10 times longer service life than turned tips
- large contact faces on the tips: no distortion of circlips, easy fitting
- joint with screw: precise, zero-backlash operation of pliers
- internal opening spring, protected
- non-slip plastic coating on the handles
- pliers body: Chrome vanadium electric steel; forged, oil-hardened
- inserted tips: spring steel wire, drawn

49 31 A0 / Style 3
with additional opening limiter (continuously adjustable opening area); avoids overstretching of small external circlips; DIN 5254 A; straight tips

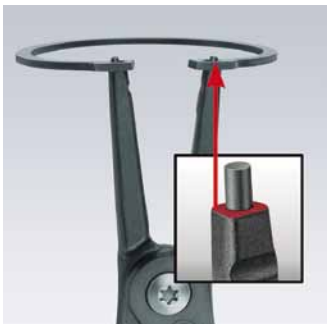
49 41 A01 / Style 4
with additional opening limiter (continuously adjustable opening area); avoids overstretching of small external circlips; DIN 5254 B; 90° angled tips

Spring inside the joint: the spring is protected inside the precisely bolted joint. It does not hinder work and cannot get dirty or lost.

Style 3 / Style 4:
With adjustable restricted opening

Pliers Sets
see page 176

Bolted joint:
high precision and smooth action



KNIPEX Precision Circlip Pliers:
fit circlips without distortion; easy and quick assembly

Circlips are held securely: large contact faces and the position of the tips make it difficult for the circlip to bounce off

Conventional Circlip Pliers:
distortion of the circlip when being fitted is possible

Circlip Tool

for internal and external circlips

- universally usable for large circlips with nominal diameters of 15 3/4" - 39 3/8"
- reliable opening and closing of the circlips and holding by self-locking precision spindle drive
- for fitting and removing circlips in one operation
- circlips are securely held thanks to short, direct attachment
- replaceable tips with 15/64" and 23/64" diameters; for perfect adaptation to the actuation bores in the circlips
- optional operation with hexagonal key, ratchet wrench or cordless drill
- areas of application e.g. wind turbines, tidal power stations, generator construction, hydropower stations, large machine construction (rolling mills, presses), shipbuilding and aerospace – wherever very high forces and torques are transmitted with large shafts and bearings
- tip material: Chrome vanadium electric steel

Electronics End-Cutting Nippers ESD

ISO 9654

64 62 120 ESD

ESD pliers (electrostatic discharge)
- electrostatic energy is discharged through the handles in a gradual and controlled manner
- protects components endangered by electrostatic discharge
- in accordance with applicable standards, e.g. IEC TR 61 340-5, DIN EN 61 340-5, SP Method 2472

- precision pliers for ultra fine cutting work, e.g. in electronics and fine mechanics
- electrically discharging handles – energy dissipative
- precision box joint
- low-friction double spring for gentle and even opening
- the mirror polish together with a fine film of oil, offers effective rust protection – no circuit faults caused by peeling chrome from plated tools
- cutting edge hardness approx. 56 HRC
- with two-color dual component handles, black/grey
- High-grade special tool steel; forged, oil-hardened

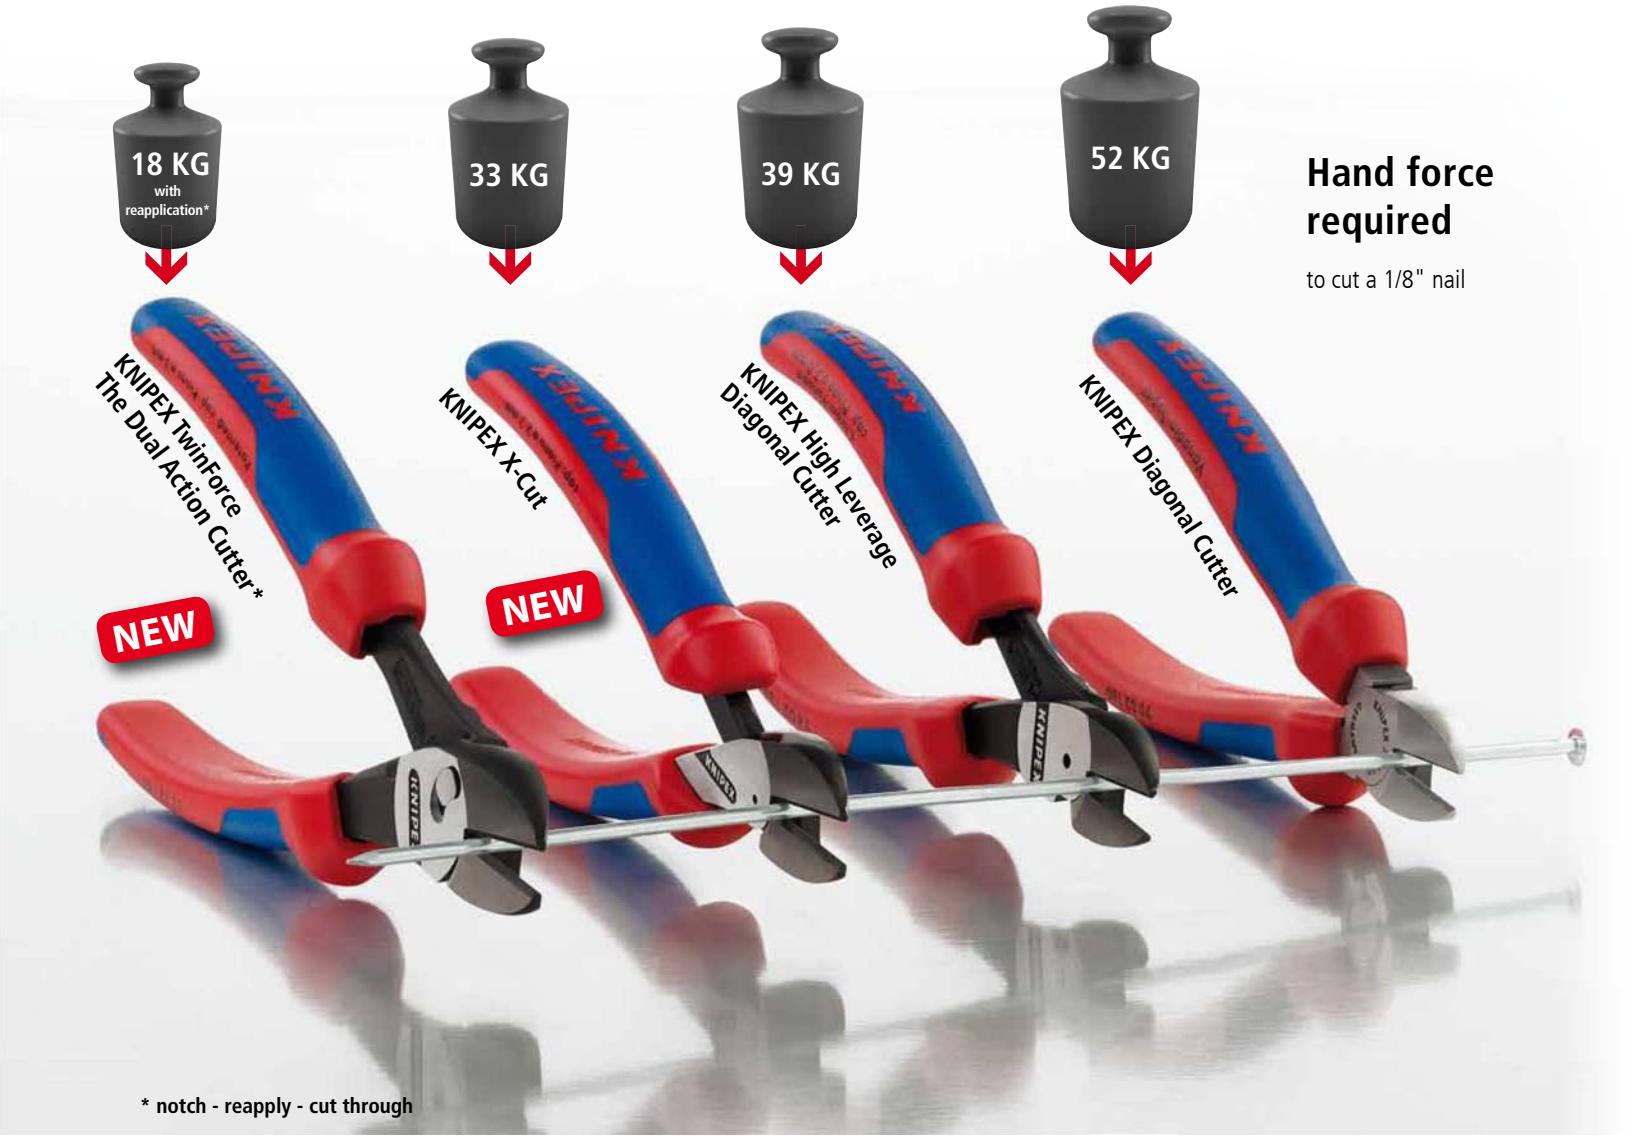
THE WORLD OF KNIPEX DIAGONAL CUTTERS



KNIPEX TwinForce

The Dual Action Cutter

Double-hinged design
Hand force is multiplied by 39

KNIPEX X-Cut

Box joint:
greatest stability with little weight
Hand force is multiplied by 16

High Leverage Diagonal Cutter

Forged on hinged joint for robust use
Hand force is multiplied by 13

Diagonal Cutter

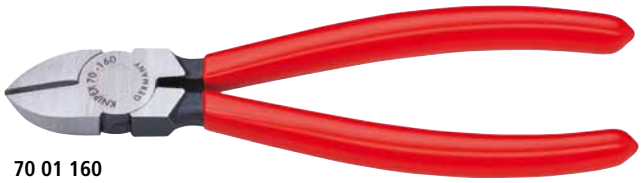
Long cutting edges for cutting cable; also precise enough for the finest stranded wires
Hand force is multiplied by 9

70

Diagonal Cutters

ISO 5749

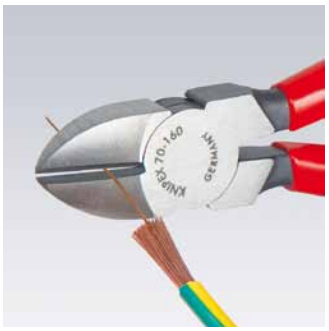
- the essential cutting tool for versatile use
- high quality material and precise workmanship for long service life
- precision cutting edges (cutting edge hardness approx. 62 HRC) for soft and hard wire
- clean cutting of thin copper wires, also at the cutting edge tips
- narrow head style for use in confined areas
- Vanadium electric steel; forged, oil-hardened



70 01 160

70 02 160

70 08 160 SBA
1000 V



Cuts fine wires cleanly over the complete length of the blades

The slim head style and precise cutting capabilitiy are perfect for working in confined areas

KNIPEX CoBolt®

Compact Bolt Cutters

ISO 5743

An all around tool for the toughest demands!
60% reduction in required force compared to conventional high leverage diagonal cutters. The ingenious lever action mechanism ensures a favorable lever ratio with very little friction. The cutting force is about 20 times higher than the hand force applied.

71 01 200

- induction hardened edges cut hard, soft and piano wire
- cuts components like bolts, nails, rivets, etc. up to 1/8" dia.
- exceptional cutting performance with minimal effort due to innovative effective lever action design
- cutting edge hardness approx. 64 HRC
- Chrome vanadium heavy-duty steel; forged, oil-hardened

71 02 200

71 02 200
with slim, two-color multi-component sleeves for better handling and easier transport; with large contact surface on the handles for better allotment of pressure and more comfortable work

71 12 200

71 12 200 / 71 22 200 / 71 32 200
opening spring and locking lever are integrated into the handles for more comfortable work and safer transport

opening spring and transport lock

Form 2
20° angled head with single-sided lock plate and diagonal cutting edge for flush cutting; with space for gripping

Form 3
the recess in the blade allows easier cutting of thicker wires, e.g. for anchor bolts in false ceilings

Form 4
the recess in the blade allows easier cutting of thicker wires, e.g. for anchor bolts in false ceilings, 20° angled head with single-sided lock plate and diagonal cutting edge for flush cutting; with space for gripping

71 22 200
∠20°

71 41 200
∠20°

The comparison 71 0x 200 with 71 2x 200 – the angled version provides a more flush cut

Conventional Bolt Cutter:

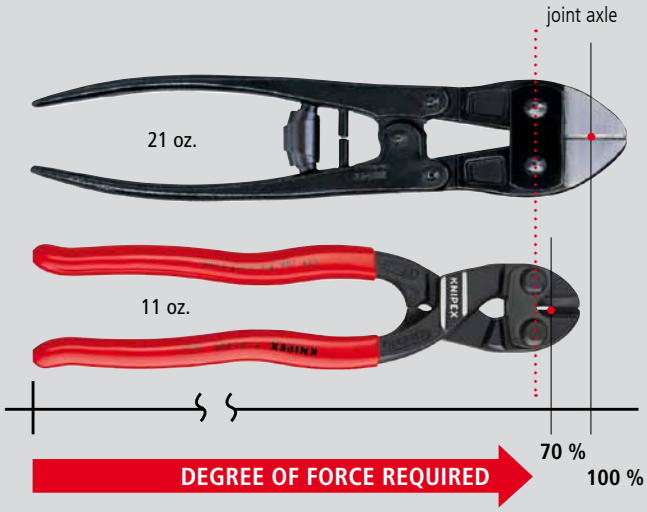
max. opening is approx. 1/8" in diameter
weight = 21 ounces
double joint

KNIPEX-Model e.g. 71 31 200 CoBolt®:

weight = 11 ounces
good grip
small size
requires 30% less power than conventional bolt cutters

● hard wire Ø 5/64"

picture not true to scale



71 31/32/41 200:
The cutting edge recess near the joint keeps thicker wires in a better cutting position (optimum lever ratio). There is no need to reposition the tool to achieve the desired cut.

TwinForce
KNIPEX

73 7

KNIPEX TwinForce

High Leverage Diagonal Cutter

73 72 180

Meet the TwinForce
The ideal tool for cutting thicker wires. New to the Diagonal Cutter family is the option to reapply the tool. This is due to the innovative double-hinged design. Each cutting repetition reduces the effort required to achieve the ultimate cut. Reapplying with the KNIPEX TwinForce allows the user to cut materials that cannot be cut with comparable diagonal cutters of the same length.

- ideal transmission of force due to double-hinged design
- extremely easy cutting with little strain
- cuts again 50% easier than the tried and tested high leverage diagonal cutters
- reliably cuts all types of wire, including steel tape
- NEW for diagonal cutters: The option to reapply the tool. The KNIPEX TwinForce cuts even 5/32" thick wire without great effort when reapplied two or three times. Conventional high leverage diagonal cutters either cannot cut these diameters or only with very great effort.
- for rough or very fine cutting
- low cutting impact: gentle on hands. The tension on muscles and tendons is relieved
- cuts wire up to Ø 5/32" without considerable effort when reapplied several times
- high degree of stability and zero-backlash due to precisely milled forged-in axle
- Chrome vanadium heavy duty steel

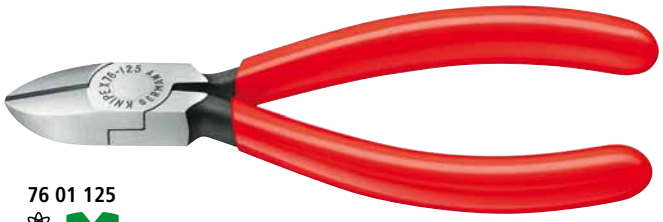
Diagonal Cutters for electromechanics

ISO 5749

- with sharp, precisely aligned cutting edges for soft, hard and piano wire
- cutting edge hardness approx. 63 HRC
- lap joint
- Vanadium electric steel; forged, oil-hardened



76 01 125

Style 1
low-friction double spring for gentle and even opening

Style 2
without bevel for flush cutting of soft wires; low-friction double spring for gentle and even opening

Style 8
tapered head with small bevel for work in confined areas (cable harnesses, multiple stranded wires)

Electronics Diagonal Cutters

ISO 9654

- for fine cutting work, e.g. in electronics and fine mechanics
- sturdy, zero-backlash box joint
- low-friction double spring for gentle and even opening
- the polish or mirror polish (only finish 2) together with a fine film of oil, offers effective rust protection – no circuit faults caused by peeling chrome from plated tools
- cutting edge hardness approx. 62 HRC
- High-grade special tool steel; forged, oil-hardened

Electronics Diagonal Cutters ESD

ISO 9654

77 02 115 ESD

77 22 115 ESD

77 42 115 ESD

ESD pliers (electrostatic discharge)
- electrostatic energy is discharged through the handles in a gradual and controlled manner
- protects components endangered by electrostatic discharge
- in accordance with applicable standards, e.g. IEC TR 61 340-5, DIN EN 61 340-5, SP Method 2472

- for very precise assembly work, e.g. in electronics and fine mechanics
- electrically discharging handles – dissipative
- sturdy, zero-backlash box joint
- low-friction double spring for gentle and even opening
- the mirror polish together with a fine film of oil, offers effective rust protection – no circuit faults caused by peeling chrome from plated tools
- cutting edge hardness approx. 62 HRC
- with two-color dual component handles, black/grey
- High-grade special tool steel; forged, oil-hardened

77 02 115 ESD
round head, with small bevel

77 22 115 ESD
round head, without bevel

77 42 115 ESD
pointed head, without bevel

Small Change. Big Difference.
KNIPEX Precision Electronics Pliers are made of high-quality ball bearing steel and processed with the highest degree of care. Each opening movement is gentle and without backlash. Each work step proceeds reliably and precisely.

- precision pliers for ultra fine cutting work, e.g. in electronics and fine mechanics
- very precisely ground and sharp cutting edges wih small bevels for precise cutting work on small electronic components
- a version without the bevel is available for flush cutting
- cutting edges additionally induction hardened, cutting edge hardness approx. 64 HRC
- approx. 20% lighter than conventional electronics pliers
- bolted joint with carefully manufactured joint surfaces for even, low-friction movement throughout the entire opening range
- smooth-running double spring for a gentle and even opening
- ergonomically optimized handle covers
- Chrome vanadium ball-bearing steel; forged

Meet the Pliers Wrench:
A One-Of-A-Kind Tool with Unlimited Possibilities...

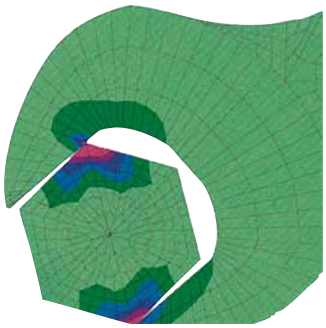
From gripping and holding to pressing and bending applications, there is little that the Pliers Wrench can't do. With smooth jaws that won't damage or mar the surface of workpieces to a push-button adjustment that maintains the tool's setting, the Pliers Wrench is everything that you need to get the job done.

- replaces a full set of inch and metric open end wrenches
- adjustable tightening tool
- excellent for gripping, holding, pressing and bending applications
- smooth jaws for careful installation of plated fittings
- will not round off nuts and bolts and won't damage chrome and other soft finishes
- parallel jaws allow infinitely variable gripping of all widths to the specified maximum size
- reliable catching of the hinge bolt: no unintentional shifting
- the action of the jaws allows bolted connections to be tightened and released quickly using the ratchet principle
- lever transmission greater than 10 - 1 for strong gripping power
- Chrome vanadium electric steel; forged, oil-hardened

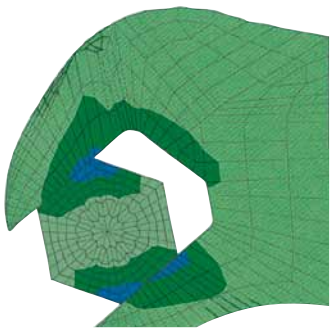
Length 6"
Mini Pliers Wrench for precision mechanics; ideal multi-purpose wrench in pocket size; perfect for inclusion in emergency tool kits; great for heavy duty use in tight locations

Length 7 1/4"
with narrow gripping jaws – for fastening/loosening situations requiring a slim tool

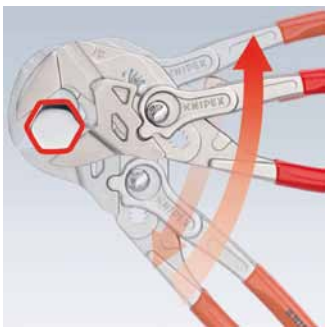
Working on plated fittings without damaging the surface



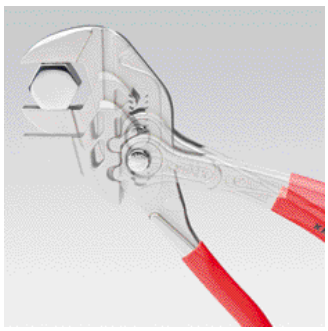
Conventional open end wrench:
edge pressure causes surface damage on edges of nuts and bolts



Pliers Wrench:
zero-backlash contact pressure, no damage to edges



Works using the ratchet principle



Fast adjustment by pushing a button

Meet the Cobra® - The Indispensable Gripping Machine.
No more time-consuming test-adjusting to achieve the correct size. Now, simply position the upper jaw to the workpiece, press the button and close the lower jaw.
Say "goodbye" to those awful blood blisters you get with other gripping pliers. We've designed a built-in pinch guard that prevents blood blisters on your hand. Your safety is our first priority.

Innovative. Efficient. Safe. That's the KNIPEX Difference.

- adjustment at the touch of a button directly on the workpiece
- fine adjustment for optimum adaptation to different size work pieces and a comfortable gripping position
- self-locking on pipes and nuts: no slipping on the workpiece and low hand force required
- gripping surfaces with special hardened teeth, teeth hardness approx. 61 HRC; low wear and reliable gripping
- box-joint design: high stability because of double guide
- reliable catching of the hinge bolt: no unintentional shifting
- pinch guard prevents operators' fingers from being pinched
- Chrome vanadium electric steel; forged, oil-hardened

Length 5"
for use in precision mechanics, hobbies and in the home;
improved access in very confined spaces, perfect for an emergency tool kit

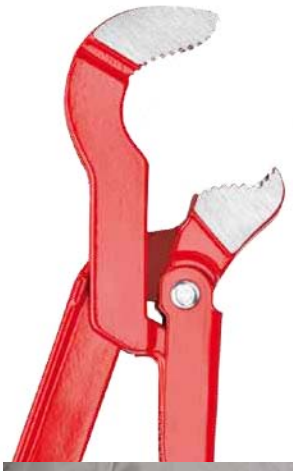
Length 7 1/4"
good access to the workpiece

Length 10"
very large gripping capacity; good access to the workpiece;
high load capacity having a slim design

Teeth set against the direction of rotation have a self-clamping effect and prevent slipping on the workpiece

Fine adjustment by pushing a button: fast and comfortable

Fast and firm adjustment directly on the workpiece



30% more capacity than
a conventional pipe wrench

KNIPEX Cobra® XL/XXL

Pipe and Water Pump Pliers

ISO 5743

87 01 400

87 01 560

The KNIPEX Cobra® XL and XXL offer the power and comfort of water pump pliers while being lighter in weight and having a greater gripping capacity than comparable pipe wrenches.
The **Cobra® XL** can grip a 3 1/2" pipe coupling and weighs 50% less than 2"pipe wrenches, which have a much lower gripping capacity. With its compact length of 16", the Cobra XL is perfect for the plumber's tool box.

The **Cobra® XXL** with its capacity of up to 4 1/2" only weighs as much as 2"pipe wrenches. It's 22" size makes it the biggest pliers around!

- greater gripping capacity but much lower weight than comparable pipe wrenches
- fast push-button adjustment directly on the workpiece; no unintentional slipping of the joint
- fine adjustment for optimum adaptation to different size workpieces and a comfortable handle width
- self-locking on pipes and nuts: no slipping on the workpiece and low handforce required
- gripping surfaces with special hardened teeth; teeth hardness approx. 61 HRC: low wear and reliable gripping
- box-joint design: high stability because of double guide
- pinch guard prevents operators' fingers from being pinched
- Chrome vanadium electric steel; forged, oil-hardened

Grips any shape object: round, square, hex or flat

Fine adjustment by pushing a button: fast and comfortable

KNIPEX Auto Adjusting Pliers PATENTED

ISO 8976

85 01 250

Cobra...Redefined.
Adjustment to the workpiece is automatic with the KNIPEX Auto Adjusting Pliers!
Just grip the pliers handles and squeeze - it's that easy!

- ideal for frequent changeovers to workpieces of different sizes
- automatic adjustment per one handed operation both for right-handed and left-handed use
- good access to the workpiece thanks to the slim dimensions in the head and joint area and the flush joint bolt
- self-locking on pipes and nuts: no slipping on the workpiece and low handforce required
- gripping surfaces with special hardened teeth, teeth hardness approx. 61 HRC: low wear and reliable gripping
- box-joint design: high stability because of double guide
- pinch guard prevents operators' fingers from being pinched
- locking lever for space saving transport with reliable closed handles
- Chrome vanadium electric steel; forged, oil-hardened

Automatic adjustment: no time-consuming trial and error adjusting to the correct opening size in case of differently sized workpieces

Slim dimensions for good access to the workpiece using one handed operation

Locking lever for space saving transport with reliable closed handles

Self-locking on pipes and nuts means no slipping off the work piece

KNIPEX RAPTOR™ Pliers PATENTED

ISO 5743

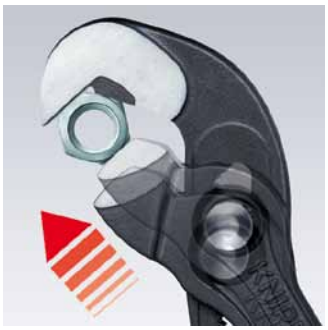
87 41 250

The KNIPEX Raptor™ Pliers combines the convenience of the comfortable push-button adjustment on the workpiece and the function of an all-purpose tightening tool.
Jaw gripping with zero backlash prevents slipping on the bolt head or rounding edges. Even rusty or thick-coated bolted connections, which usually cannot be gripped by a conventional spanner, can be managed by the exceptionally powerful gripping jaws of this tool.

- for inch and metric nuts and screws with widths across flats from 3/8" up to 1 1/4"; self-locking in the range from 11/16" on; no slipping on the workpiece
- zero-backlash gripping of inch or metric hexagonal head screws; no rounding of screw heads
- reliable and tight gripping of rounded, rusty or overly painted nuts and screws; ideal for work on vehicle brake systems
- quick tightening of nuts and bolts using ratchet action
- adjustment at the touch of a button directly on the workpiece, one handed operation
- fine adjustment for optimum adaptation to different size workpieces and a comfortable handle width
- box-joint design: high stability because of double guide
- secure catching of the hinge bolt: no unintentional shifting
- favorable lever action: optimum transmission of force
- guard prevents operators' fingers from being pinched
- replaces a set of wrenches; ideal for tightening locknuts
- Chrome vanadium electric steel; forged, oil-hardened

Grips rusted nuts with rounded edges

Self-locking: no slipping on the workpiece and less effort required



Fine adjustment by pushing a button: fast and comfortable

KNIPEX Cobra® ES

Water Pump Pliers extra-slim

ISO 8976

87 51 250

The KNIPEX Cobra ES is ideal for working in confined areas. Featuring a slim head and long, narrow jaws, this tool reaches into places other pliers can't.

- ideal for service and maintenance, equipment repair, automotive and general industry
- long, narrow jaws
- good access to the workpiece due to very slim construction of head and joint area
- grips flat material due to the three-point rest
- adjustment at the touch of a button directly on the workpiece
- fine adjustment for optimum adaptation to different size workpieces and a comfortable handle width
- self-locking on pipes and nuts: no slipping on the workpiece and low handforce required
- box-joint design: high stability because of double guide
- secure catching of the hinge bolt: no unintentional shifting
- favorable lever action: optimum transmission of force
- guard prevents operators' fingers from being pinched
- Chrome vanadium electric steel; forged, oil-hardened

Grips nuts up to 1 3/8" across flats

Slim head and joint area (compared to conventional water pump pliers)

Fine adjustment by pushing a button: fast and comfortable

Optimum access to the workpiece. Ideal for service and maintenance, equipment repair, automotive and general industry

Meet the Alligator®
More output and comfort compared to conventional water pump pliers of the same length: offer 9 adjustment positions for 30% more gripping capacity; good access to the workpiece due to slim size in the head and joint areas

- self-locking on pipes and nuts: no slipping on the workpiece and low handforce required
- gripping surface with special hardened teeth, teeth hardness approx. 61 HRC; low wear and reliable gripping
- box-joint design: high stability because of double guide
- robust construction; particularly suitable for heavy duty work
- pinch guard prevents operators' fingers from being pinched
- Chrome vanadium electric steel; forged, oil-hardened

Self-locking on pipes and nuts; no slipping on the workpiece. Less handforce is required since handles do not need to be squeezed. Simply put pressure on the upper handle for a powerful grip.

Alligator®

Conventional water pump pliers

KNIPEX Alligator®

specially hardened teeth
high resistance to wear, allowing continuous and reliable gripping

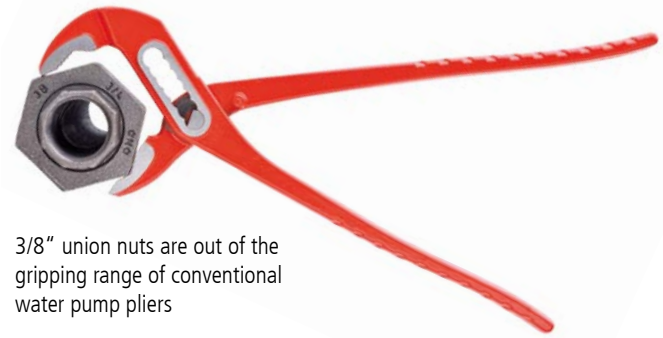
robust adjusting mechanism
insensitive to dirt; particularly suitable for outdoor work

9 adjustment position
30% more gripping capacity, optimized adjustment to the workpiece and a comfortable gripping position; slim size

box joint, double guide
no loosening of the joint connection; heavy duty

Alligator® 250: convincing alternative

The Alligator® 250 mm grips the union nut in a 3/4" screw connection with comfortable handle positioning



3/8" union nuts are out of the gripping range of conventional water pump pliers

Alligator® 300 instead of a 1 1/2" pipe wrench

Alligator® 300: 2 3/4" capacity compared to the 1 1/2" capacity of conventional pipe wrenches

90 20 185

Turning the cutter slightly when operating prevents brittle pipes from splitting or breaking.

- for cutting thin-walled plastic pipes (conduit plastic pipes) and flexible hoses, also with fabric reinforcement, of plastic and rubber up to 1″ exterior dia.
- not suitable for cutting cables
- with opening spring and locking lever
- tool body: plastic, fiberglass – reinforced
- blade: Special tool steel; oil-hardened, interchangeable

With replaceable blade

Pipe Cutter

for composite pipes and corrugated conduit

PATENTED

90 25 20

- for cutting composite pipes with diameters of 1/2″ - 1″ and for cutting flexible corrugated conduit pipes with a diameter of 3/4″ - 1 3/8″ without damaging the pipe inside
- a calibration arbor can be fitted, for example for Geberit composite pipes with 29/64″ and 38/64″ dia.
- tool body: High-grade chrome vanadium electric steel; oil-hardened
- blades: Special tool steel; oil-hardened, interchangeable

Composite pipes of 1/2 - 1″dia. are cut cleanly and without deformation

Clean cut of corrugated conduit 3/4″ - 1 3/8″ dia.

Pipe Cutter for composite and plastic pipes

PATENTED

- for cutting thick-walled plastic and composite pipes with diameters from 1 - 1 37/64"
- cuts pipes using the ratchet principle in several strokes
- self-adapting pipe support positions pipes of various diameters correctly for a rectangular cut
- tool body: High-grade chrome vanadium electric steel, oil-hardened
- blade: Special tool steel; oil-hardened, interchangeable

90 25 40

Clean cut of thick-walled plastic and composite pipes

Notching and chip breaking in a single pass

Notching without chip breaking

90 61 Notching Pliers PATENTED

90 61 20

The KNIPEX Notching Pliers produce the most common notches in plastic ledges and cable ducts in a simple, fast and clean way. No time-consuming sawing out or nibbling and no additional work required.

- special pliers for notching recesses into plastic ledges and plastic casings for electric and sanitary installation
- notches can be enlarged by initial and final cut
- clean-cut edges
- easy handling
- with opening spring, opening limiter and locking lever
- pliers body: Special tool steel; rolled, oil-hardened

95 1

Cable Shears with twin cutting edges

PATENTED

The double cutting edge allows a comfortable handle position in all cutting situations inside the specified cutting capacity.

95 11 200

- for cutting copper and aluminium cables
- not suitable for ACSR, steel wire and hard drawn copper conductors
- precision ground, hardened blades
- clean and smooth cut without crushing and deformation
- by dividing the cutting actions into initial cut (insulating sheath in the front cutting area) and final cut (conductor in the back cutting area), cables up to Ø 51/64" can be cut in one handed operation
- less effort required due to favorable lever ratio and optimized cutting edge geometry
- with pinch guard and slip guard
- adjustable screw joint, self-locking
- High-grade special tool steel; forged, oil-hardened

95 12 200

95 18 200 SBA

- insulated and tested according to IEC 60900 and ASTM F1505

95 18 200 SBA

Initial cut:
Using the front cutting edge to cut the insulating sheath on larger cable diameters leaves an ergonomic handle opening width.

Final cut:
After cutting the sheath in the front profile, the cut is finished through the metal part of the cable in the rear profile. Initial cut in the front profile, final cut in the rear profile – to keep it as easy as possible.

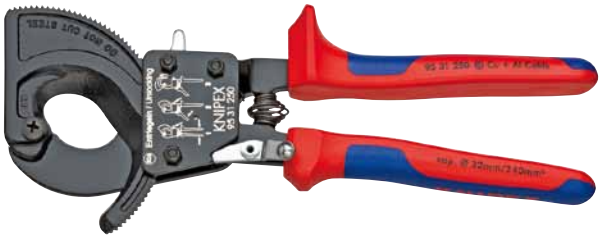
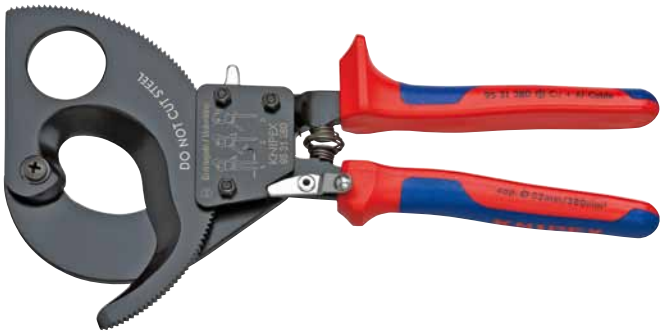
Cable Cutters (ratchet action)

PATENTED



95 31 250



95 31 280

95 31/36 280
suitable for aluminium sector cable up to 4 x 150 mm²

- for cutting copper and aluminium cables, single and multiple wire
- not suitable for ACSR, steel wire and wire ropes
- precision ground, hardened blades
- clean and smooth cut without crushing and deformation
- one handed operation using ratchet principle
- little handforce required due to very high transmission ratio
- two-stage ratchet drive for easy cutting
- simple handling as a result of light weight and compact design – can be used even in confined areas
- with pinch guard and slip guard
- High-grade special tool steel; forged, oil-hardened

95 31 280: Large cutting capacity:
max. 2" dia. / cap. max. 750 MCM

Ratchet principle and two-stage ratchet drive for easier cutting

95 3

Cable Cutters (ratchet action)

95 32 320

95 36 320
1000 V

Sturdy. Easy to use. Innovative ratchet-drive.
For cable up to 2 23/64" in diameter.

- easy handling due to low weight (28.2 oz) and compact construction (12 1/2" length) – usable in confined areas
- cutting through copper and aluminium cables with diameters of up to 2 23/64" in one handed and two handed operation
- hardened cutting edges, precisely ground, cut smoothly and neatly without crushing
- for cutting copper and aluminium single conductors as well as multiple stranded cables
- not suitable for cutting ACSR, steel wire and wire ropes
- innovative three-stage ratchet-drive with high leverage for easy cutting in one handed and two handed operation
- with pinch guard and slip guard
- fixed handle with support area for laying down the pliers when cutting
- High-grade special tool steel; forged, oil-hardened

95 36 320

95
32

Cable Shears (ratchet action)

with telescopic handles

95 32 038

The handles are adjustable in length and can be angled for easier work: set the handle length to the optimum lever for powerful cutting; put the handle at an angle for an ergonomic gripping position.

Cable Shears with adjustable telescopic handles allow angular positioning

- for cable diameters up to 1 1/2"; handles can be positioned at an angle to set the optimum handle width; also suitable for work in confined areas
- comfortable work thanks to ratchet action and light weight
- heavy duty telescopic handles made of oval aluminium tubing; extendable up to 30" for maximum leverage on large cable diameters; retractable down to 22" for minimum space requirements during transport
- replaceable cutting head
- extensive cutting range up to max. Ø 1 1/2" or max. 550 MCM in copper and aluminium cables
- easier, neater cut due to optimized cutting edge geometry
- adjustable bolted joint
- cutting head: Special quality, high-grade tool steel; oil-hardened
- handles: high-strength oval aluminium tubing

Setting of a favorable handle position

After the first partial cut, the handles open by ratchet

Repeat cutting and opening actions until the cable is cut through

Wire Rope Shears forged

double function: neat cutting, precise crimping

95 61 190

Cuts all wire ropes without splaying or fanning out, including strong materials like tire cord.

- with two crimping dies for end caps on Bowden cable sheaths and end ferrules for wire rope
- comfortable work thanks to slim design and internal opening spring
- bolted joint for precise blade guidance, readjustable
- high leverage for reduced effort
- cutting edge hardness approx. 64 HRC
- Chrome vanadium heavy-duty steel; forged, oil-hardened

95 62 190

Crimping of the end ferrule onto the traction cable

Crimping of the end caps on the Bowden cable sheath

Crimp System Pliers

PATENTED

for exchangeable crimping dies

97 43 200

97 43 200 A

With the possibility of crimping almost all currently available crimping connections with just one tool and state-of-the-art crimping pliers technology, the Crimp System Pliers solves almost all tasks in mobile and stationary crimping technology and is an excellent tool for professionals to use for standard crimping.

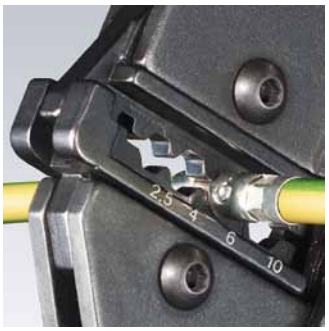
- just one tool for almost 1,000 crimping applications
- almost parallel crimping movement
- repetitive, high crimping quality due to precision dies and integral lock (self-releasing mechanism)
- crimping pressure has been set precisely (calibrated) in the factory
- optimum transmission of force due to lever action for fatigue-reduced operation
- ergonomically designed handles
- different locators for precise positioning of the connectors
- crimp dies for applications not covered in the range offered are available upon request.
- Chrome vanadium electric steel in special quality; oil-hardened

97 43 200
in a plastic case; foam insert with recesses for crimping dies and locators; with service tool (Allen key), screws and nuts; without crimping dies

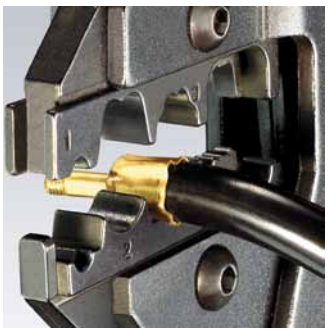
97 43 200 A
pliers without crimping dies, without case

97 43 05
with attached crimping dies for non-insulated open plug-type connectors (3/16 and 1/4" connector width)

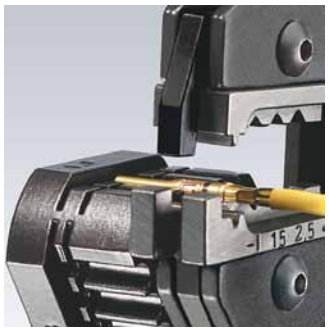
97 43 06
with attached crimping dies for insulated terminals and plug connectors



Crimp System Pliers 97 43 200 with crimping dies 94 49 30 for non-insulated butt connectors



Crimp System Pliers 97 43 200 with crimping dies 97 49 35 for spark plug connectors



97 43 200 with crimping dies 97 49 61 and locator 97 49 90 for turned types of connectors with varying pin diameters, revolvable

97 43 400 Crimp System Pliers with crimping dies 97 49 24 and locator 97 49 93 for D-Sub plugs

Mounting Tool for MC3 connectors

97 49 65 2

- for easy and quick assembly of MC3 solar cable connectors
- for fit solar sleeves for connectors from 2.5 to 10.0 mm²
- three capsules (2.5 / 4.0; 6.0; 10.0 mm²) for pulling on the sleeves, integrated in the detachable handle
- body: plastic, fiberglass-reinforced

The assembly tool comes with three torpedo capsules for the various cable cross-sections

Crimping Pliers for Western plugs

97 51 10

- professional tool for cutting and stripping unshielded ribbon telephone cables
- for crimping 6- and 8-pole Western plugs type RJ 11/12 (3/8″ width) and type RJ 45 (15/32″ width)
- exact crimping process due to parallel crimping
- repetitive, high crimping quality due to integral lock (self-releasing mechanism)
- optimum transmission of force due to lever action for fatigue-reduced operation
- with length cutter and dismantling knife for ribbon cables 1/4″ and 1/2″ length
- with additional stripping device for round cables
- Chrome vanadium electric steel in special quality; oil-hardened

Product Number	↔ inch	↔ mm				Pliers	Handles	Capacity	Number of crimping positions	⚖ Ounces
97 51 10	7 1/2	190				burnished	with multi-component grips	RJ 11/12 (6-poles) 3/8″ (9.65 mm) RJ 45 (8-poles) 15/32″ (11.68 mm)	2	12.0
97 59 06		4 spare blades for 97 51 04 / 97 51 10								

97
52

Crimping Pliers for two handed operation

- the new lever transmission reduces the handforce up to 30% compared to regular crimping pliers
- repetitive, high crimping quality due to precision dies and integral lock (self-releasing mechanism)
- crimping pressure has been set precisely (calibrated) in the factory
- two hand operation for easy crimping of large conductor diameters
- easy handling as a result of well balanced center of gravity, angled head and ergnomically shaped handles
- Chrome vanadium electric steel in special quality; oil-hardened

97 52 06

97 52 09

First step: move the handle with two fingers only until both jaws touch the connector to be crimped

Second step: now use the whole hand for further crimping procedure

Third step: when greater handforce is required, such as e.g. when crimping insulated connectors 6 mm², two handed operation is possible with the longer handles

KNIPEX PreciForce® Crimping Pliers

97 52 34

97 52 36

For daily crimping applications, the specialist likes crimping pliers that work precisely and reliably.
In addition, they should be light, comfortable to use, robust and reasonably priced – Meet the PreciForce®

- repetitive, high crimping quality due to precision dies and integral lock (self-releasing mechanism)
- crimping pressure has been set precisely (calibrated) in the factory
- high transmission of force thanks to lever action for fatigue-reduced work
- good handling thanks to handle position, low weight, short design and ergonomically shaped handles
- Chrome vanadium electric steel in special quality; oil-hardened

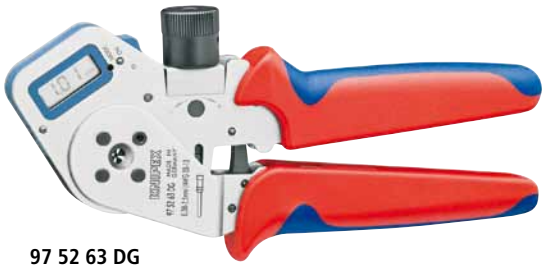
Four-Mandrel Crimping Pliers for turned contacts



97 52 63 DG

PATENTED

97 52 65

PATENTED

97 52 65 DG

PATENTED

97 59 65 2

Standard locator

Turned contacts are used for demanding plug type connections, e.g. in the medical industry and aviation. Extremely reliable crimping connections can be achieved only with pliers that work with absolute precision and maintain the required crimping depth in the 1/100 mm range. KNIPEX has all of the tools you need to get these jobs done.

- for crimping turned contacts
- four-mandrel crimping for top-quality crimping connections
- mandrel gauge to check the basic setting
- repetitive, high crimping quality due to integral lock (self-releasing mechanism)
- optimum transmission of force due to lever action for fatigue-reduced operation
- high operation comfort thanks to ergonomic shape
- Chrome vanadium electric steel in special quality; oil-hardened

97 52 63 DG
fine adjustment of pressure depending on the conductor's diameter by means of adjusting wheel; with digital display of the preset crimping capacities; display reversible between mm / inch and MIL numerical values; packaged in a plastic case with foam insert and locator for holding the contacts

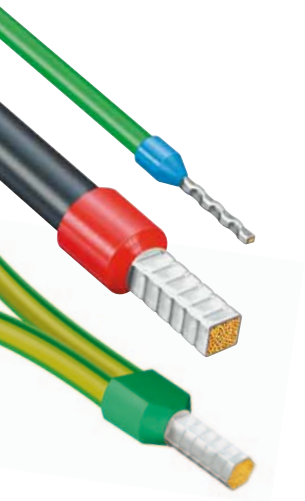
Self-Adjusting Crimping Pliers for end sleeves (ferrules) with lateral access

PATENTED

97 53 04

97 53 14

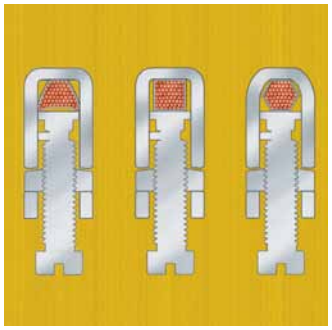


Small crimping pliers for wire-end ferrules with two great advantages for the user:
- Automatic self-adjustment to the wire end ferrule used. This allows the specialist to work with less strain and enables secure, reliable and quick crimping.
- Extensive range of applications: square crimping 0.08 to 10.0 mm²; hexagon crimping 0.08 to 6.0 mm²

- for crimping end sleeves (ferrules) according to DIN 46228 parts 1 + 4
- self-adjusting adaptation to the desired wire end ferrule size: no crimping faults caused by using the wrong die
- lateral loading of the end sleeves (ferrules) into the tool
- repetitive, high crimping quality due to integral lock (self-releasing mechanism)
- these tools have been set precisely (calibrated) in the factory
- optimum transmission of force due to lever action for fatigue-reduced operation
- high operation comfort thanks to shape and low weight
- Chrome vanadium electric steel in special quality; oil-hardened

97 53 04
square crimping for optimum contact areas in the clamp connection

97 53 14
heaxagonal crimping for optimum positioning in confined areas



The square crimping allows for better contact. The hexagonal crimping comes very close to the space-saving round shape. Compared to the square crimp, it has the same cross-section and can produce optimum contact in narrow, round terminal connectors. Both crimping shapes allow the user to easily feed into the terminal connection.

Square-crimped wire end ferrules always ensure good contact surfaces in the clamped connection

Product Number	↔ inch	↔ mm		Pliers	Handles			Applications	Capacity mm²	AWG	Number of crimping positions	⚖ Ounces

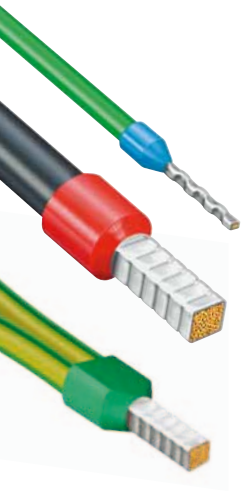
Self-Adjusting Crimping Pliers for end sleeves (ferrules) with front loading

PATENTED

97 53 08

97 53 09



The crimping pliers for wire end ferrules with three great advantages for the user:
- Automatic self-adjustment to the wire end ferrule used. This allows the specialist to work with less strain and enables secure, reliable and quick crimping.
- Range of applications also for large cross-sections: crimping 7 - 28 + 5 AWG
- Front loading: very helpful under difficult working conditions in confined spaces

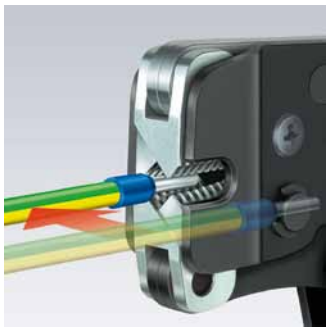
- for crimping wire end ferrules
- self-adjusting adaptation to the desired wire end ferrule size: no crimping faults caused by using the wrong die
- front loading of the wire end ferrules into the tool
- repetitive, high crimping quality due to integral lock (self-releasing mechanism)
- crimping pressure has been set precisely (calibrated) in the factory, readjustable
- optimum transmission of force due to toggle lever action for fatigue-reduced operation
- high operation comfort thanks to ergonomic shape and low weight
- Chrome vanadium electric steel in special quality; oil-hardened

97 53 08
Crimping from 7 to 28 AWG (0.08 - 10.0 mm²) in one profile; wire end ferrules up to 13 AWG (2.5 mm²) can also be loaded parallel from the side

97 53 09
Crimping from 7 to 28 and 5 AWG (0.08 - 10.0 mm² and 16.0 mm²) in one profile; with selector lever for setting the crimping area either to 7 to 28 or 5 AWG (0.08 - 10.0 mm² or 16.0 mm²)

Square crimping

Front loading of wire end ferrules e.g. in switchboards



97 53 08: Lateral loading of wire end ferrules up to 13 AWG (2.5 mm²) parallel from the side e.g. in confined areas

Tool Set for Photovoltaics

97 91 01

- with tools for photovoltaics
- without crimp dies – for individual equipment – please order separately (see ref. 97 49 ..)
- with service tools (Allen key) for changing crimp dies
- shock-resistant plastic case
- foam insert with recesses for tools, crimp dies and locators
- external dimensions (W x H x D): 13 37/64 x 3 5/32 x 11“
  external dimensions (W x H x D): 345 x 80 x 280 mm

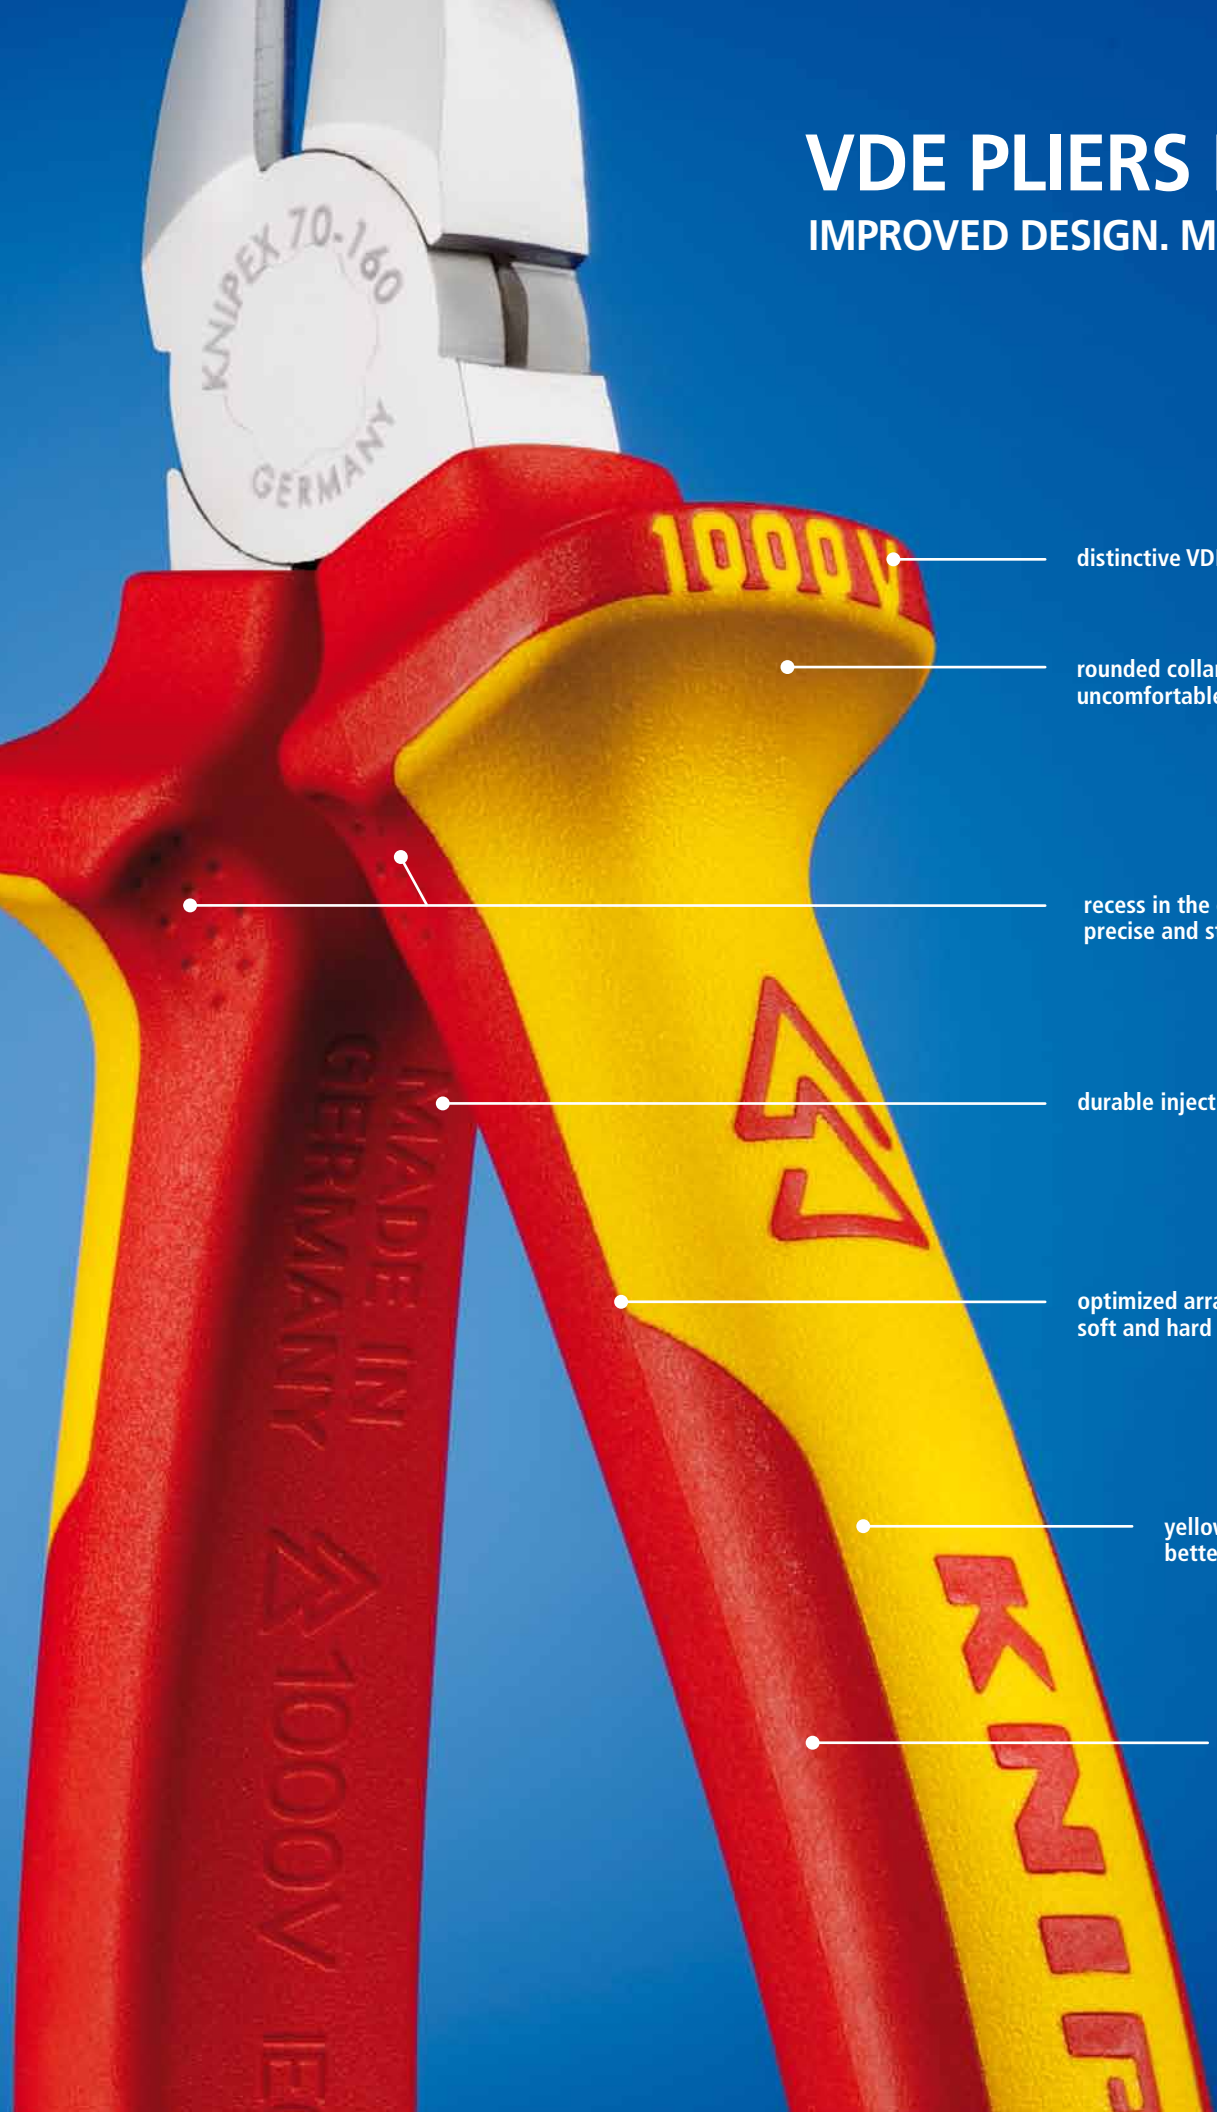
VDE PLIERS HANDLES:
IMPROVED DESIGN. MORE COMFORT.



distinctive VDE design

rounded collar edges reduce uncomfortable pressure points

recess in the collar to facilitate a precise and steady pliers guidance

durable injection-molded marking

optimized arrangement of the soft and hard components

yellow, softer material for a better grip when force is applied

red, harder material reduces friction when the grips need to move in the hand

INSULATED TOOLS

Work on electrical installations is subject to the special protection tasks of authorities and insurance companies. This resulted in the creation of diverse national and international safety standards (in the US NFPA 70 E, internationally IEC 60364). Only a qualified electrician who respects and follows these and maybe additional regulations is permitted to carry out work on electrical installations (including live working). He has to use special tools for this particular work that have been specifically made for this kind of work and have been thoroughly tested.

KNIPEX insulated tools are made of high-quality materials, which have been manufactured and tested in conformance with the regulations of national and international standards. If the prescribed method for working on electrical installations (see above) are observed, these tools offer the greatest possible protection even when it is necessary to work live up to AC 1000 V (alternating current) and DC 1500 V (direct current).

Since 1987 the IEC 60900 has specified worldwide requirements for tools for live working. For the US this standard has been adapted as ASTM F 1505. Tests on KNIPEX tools which bear the special mark **1000 V** include subjecting them to routine tests with 10,000 volts to check their dielectric strength. This gives the user a considerable buffer of additional protection even if work on electrical installations needs to be performed live.

The mark **1000 V** identifies KNIPEX insulated tools as being suitable for live working. The specified standard also shows the requirements our claim can be measured against. The manufacturer name KNIPEX on the insulation indicates that we accept responsibility for the correctness of this information. The marks prove: The observation of these requirements is monitored not only by the KNIPEX quality assurance team but also e.g. by the independent VDE (Association of German Electricians).

Because the purchase of insulated hand tools is a matter of trust.

Type examination, manufacturing inspections and stock monitoring by the independent VDE testing center.

INSULATION BY INJECTION MOLDED SLEEVES (VERSION 6)

KNIPEX pliers with the two-color multi-component handle insulation meet the requirements of the international standard IEC 60900. This claim is confirmed by the VDE/GS mark, awarded by an prestigious independent neutral inspection body and of ASTM F 1505.

The slip guard is designed to prevent the hand from slipping unintentionally on conductive metal parts at the head of the pliers.

DIPPED INSULATION (VERSION 7)

Other hand tools such as open-ended spanners/single-ended box wrenches, socket wrenches, ratchets etc. are insulated at KNIPEX using a plastic dipping method. These also meet all requirements of the international standards IEC 60900 and ASTM F 1505. To round off this range, KNIPEX also insulates pliers in a dipping process to adapt these tools concerning appearance and production method to the other dipped insulated tools. These pliers also bear the VDE/GS mark.

The firmly bonded extra thick dipped insulation is made of insulating material which is free of harmful substances.

Two layer insulation at the ends of the handles. This prevents cracks caused by an impact.

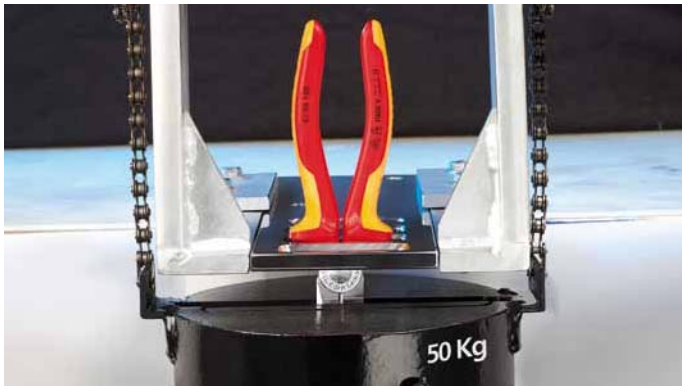
Always comply with the currently valid regulations and observe the SAFETY INSTRUCTIONS given below:

- Insulated tools must be transported and stored in a manner that will prevent any damage to the insulation.
- Check before every use whether the insulation is damaged in any way, defective tools must be discarded.
- Always keep your insulated tools clean and dry.
- Wear protective goggles when working with cutting nippers or working overhead.
- Always wear goggles or a facial mask when working on, or close to live equipment.
- Make sure the workplace is clean and orderly, particularly when you are working on live installations.
- Wear protective clothing and use additional safety equipment (e.g. insulating gloves, insulating mats, protective covers) especially in confined working spaces.
- Use only a tool with suitable dimensions. That will prevent slipping on the workpiece and unintentional contact with non-insulated parts.
- Make sure that detached parts or cut-off ends of conductors do not fall onto live parts.

KNIPEX INSULATED TOOLS – 100 % TESTED, ONE BY ONE

Testing dielectric strength

Each KNIPEX 1000 V insulated tool has been tested individually. This individual testing is done with a test voltage of AC 10,000 volts. This test load, which is 10 times as high as the maximum permitted voltage during work, shows probable cause to the user to trust a reliable insulation when live working.



Testing the adhesion of the insulating coating

The adhesion of the insulating coating is tested after storage of 168 hours at 158°F / 70°C. In case of pliers a tensile load of 500 N is applied. The insulating material must remain firmly bonded to the basic tool.

Testing low temperature impact strength

The tools are cooled down to -13°F / -25°C. The insulation material must retain the toughness necessary to ensure that it does not break when hit or knocked.

Testing burning behaviour

KNIPEX uses only flame-resistant and self-extinguishing plastics for insulation.

Testing electrical insulation

After submersion in water for 24 hours, the tools are tested with AC 10,000 V for 3 minutes including measuring of the leakage current. The reading of the leakage current must stay below the limits defined in the standards.

Testing indentation resistance

The insulation heated to 158°F / 70°C must prove under standardized test conditions that the warm plastic has sufficient mechanical strength to resist expected loads.

02

High Leverage Combination Pliers

ISO 5746 IEC 60900 ASTM F1505

- 35% less effort required compared to conventional combination pliers
- easier work due to high leverage design
- with cutting edges (hardness approx. 63 HRC) for soft, hard, piano and ACSR wire
- long cutting edges for thicker cables
- with gripping zones for flat and round material, suitable for versatile use
- High-grade special tool steel; forged, oil-hardened

1000 V

- multifunctional pliers for the electrical installation; for cutting cable, stripping and crimping end sleeves (ferrules), to grip flat and round material, for bending, deburring,
- 6 functions in one pair of pliers
- smooth surfaces near the tips grip single conductors without damaging them; serrated gripping surfaces and pipe grip for gripping flat and round material
- clear-cut outside edge on the jaw for working on flush-mounted junction boxes and deburring feed-through holes
- stripping holes for 12 + 14 AWG
- crimp die for end sleeves (ferrules) 12 - 20 AWG
- cable shears with (induction-hardened) precision cutting edges for copper and aluminium cables up to 19/32" dia.
- slim dimensions for easy access
- bolted joint: precise, zero backlash operation of pliers
- High-grade special tool steel; forged, oil-hardened

25 Snipe Nose Side Cutting Pliers

(radio pliers)

ISO 5745 IEC 60900 ASTM F1505

- suitable for fine gripping and cutting work
- pointed, half-round jaws
- serrated gripping surfaces
- with cutting edges for soft, medium and hard wire
- cutting edges additionally induction hardened, cutting edge hardness approx. 61 HRC
- Vanadium electric steel; forged, oil-hardened

70

Diagonal Cutters

ISO 5749 IEC 60900 ASTM F1505

- the essential cutting tool for versatile use
- high quality material and precise workmanship for long service life
- precision cutting edges (cutting edge hardness approx. 62 HRC) for soft and hard wire
- clean cutting of thin copper wires, also at the cutting edge tips
- narrow head style for use in confined areas
- Vanadium electric steel; forged, oil-hardened

70 08 160 SBA

1000 V

70 08 180 SBA

1000 V

High Leverage Diagonal Cutters

ISO 5749 IEC 60900 ASTM F1505

20% reduction in required force
compared to conventional diagonal cutters of the same length. With forged-on joint axle.

- for very tough, continuous use
- high cutting performance with minimum effort due to optimum coordination of the cutting edge angle, transmission ratio and ergonomic handle shape
- precision cutting edges (cutting edge hardness approx. 64 HRC) cut several types of wire including piano wire
- Chrome vanadium heavy duty steel; forged, oil-hardened

KNIPEX X-Cut

ISO 5749 IEC 60900 ASTM F1505

73 06 160

1000 V

- box-joint design: highest stability at low weight
- dual supported joint axis for heavy duty cutting
- high cutting capacity with very little effort due to the optimum coordination of cutting edge angle and lever ratio with off center pivot point
- 40% less effort required compared to diagonal cutters of the same length
- large opening width for thicker cables
- cuts all wires precisely, even fine copper wires
- compact, low weight construction
- universally usable in assembly, maintenance and production
- Chrome vanadium heavy duty steel; forged, oil-hardened

07

Pliers Wrench

IEC 60900 ASTM F1505

86 07 250 SBA

1000 V

- replaces a full set of inch and metric open end wrenches
- adjustable tightening tool
- excellent for gripping, holding, pressing and bending applications
- smooth jaws for careful installation of plated fittings
- will not round off nuts and bolts and won't damage chrome and other soft finishes
- parallel jaws allow infinitely variable gripping of all widths to the specified maximum size
- reliable catching of the hinge bolt: no unintentional shifting
- the action of the jaws allows bolted connections to be tightened and released quickly using the ratchet principle
- lever transmission greater than 10 - 1 for strong gripping power
- Chrome vanadium electric steel; forged, oil-hardened

KNIPEX Cobra® VDE

Hightech Water Pump Pliers

ISO 5749 IEC 60900 ASTM F1505

87 28 250 SBA

1000 V

It's easy to achieve the perfect capacity on the KNIPEX Cobra® VDE Pliers. You don't even have to push the button! Simply place the upper gripping jaw of the pliers on the work piece and slide the upper handle forward.

- adjustment by shifting the jaw directly on to the workpiece: fast, reliable and comfortable handle width
- opening at the touch of a button off the workpiece
- fine adjustment for optimum adaptation to different workpiece sizes and a comfortable gripping position
- good access to the workpiece due to slim size in the head and joint area
- self-locking on pipes and nuts: no slipping on the workpiece and low handforce required
- gripping surfaces with special hardened teeth, teeth hardness approx. 61 HRC: low wear and reliable gripping
- box-joint design: high stability because of double guide
- pinch guard prevents operators' fingers being pinched
- Chrome vanadium electric steel; forged, oil-hardened

Quick adjustment to the workpiece without using the push-button, hands stay behind guard

Just push the pliers handle to adjust

95 0

Cable Shears

IEC 60900 ASTM F1505

95 06 230
1000 V

- insulated and tested according to IEC 60900 / ASTM F 1505
- not suitable for ACSR, steel wire and hard drawn copper conductors
- precision ground, hardened blades
- no crushing, only slight deformation of the cable
- with pinch guard and slip guard
- adjustable bolted joint
- shears body: Surgical steel; stainless, air-hardened
- handles: plastic, impact-resistant

95 06 230
for copper conductors single wire up to 16 mm², multiple wire up to 1/0 AWG, fine-stranded up to 70 mm² and aluminium conductors multiple wire up to 70 mm²; easy cutting with one handed operation due to high transmission ratio; stainless – surgical steel, oil-hardened and tempered

Product Number	↔ inch	↔ mm		Head	Handles	Cutting capacities Ø inch	Ø mm	mm²	AWG	Ounces
95 06 230	9 1/4	230	1000 V	polished	plastic insulated, VDE-tested	5/8	16.0	50	1/0	9.7

95 1

Cable Shears

IEC 60900 ASTM F1505

95 18 165 SBA
1000 V

- for cutting copper and aluminium cables, single and multiple wire
- not suitable for ACSR, steel wire and hard drawn copper conductors
- precision ground, hardened blades
- clean and smooth cut without crushing and deformation
- easy cutting with one handed operation
- with pinch-guard and slip-guard
- adjustable bolted joint, self-locking screw
- High-grade special tool steel, forged, oil-hardened

Cut performed with a Diagonal Cutter: high effort required, inaccurate cut, considerable deforming and crushing of the cable

Cut effected with a Cable Shear: easy, clean cut without any deformation of the cable

Product Number	↔ inch	↔ mm		Style	Tool	Handles	Cutting capacities Ø inch	Ø mm	mm²	AWG	Ounces
95 18 165 SBA	6 1/4	165	1000 V	1	burnished	insulated with multi-component grips, VDE-tested	19/32	15.0	50	1/0	8.8

95 1

Cable Shears with twin cutting edge

IEC 60900 ASTM F1505

PATENTED

95 18 200 SBA

1000 V

- for cutting copper and aluminium cables
- not suitable for ACSR, steel wire and hard drawn copper conductors
- precision ground, hardened blades
- clean and smooth cut without crushing and deformation
- by dividing the cutting actions into initial cut (insulating sheath in the front cutting area) and final cut (conductor in the back cutting area), cables up to Ø 51/64" can be cut in one handed operation
- less effort required due to favorable lever ratio and optimized cutting edge geometry
- with pinch guard and slip guard
- adjustable screw joint, self-locking
- High-grade special tool steel; forged, oil-hardened

Initial cut: Using the front cutting edge to cut the insulating sheath on larger cable diameters leaves an ergonomic handle opening width.

Final cut: After cutting the sheath in the front profile, the cut is finished through the metal part of the cable in the rear profile. Initial cut in the front profile, final cut in the rear profile – to keep it as easy as possible.

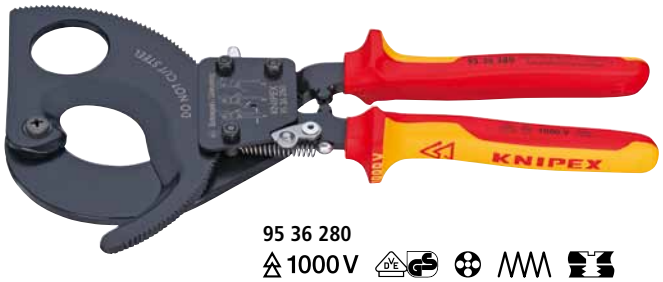
95 3

Cable Cutters ratchet action

PATENTED

IEC 60900 ASTM F1505



95 36 280
1000 V

- for cutting copper and aluminium cables, single and multiple wire
- not suitable for ACSR, steel wire and wire ropes
- precision ground, hardened blades
- clean and smooth cut without crushing and deformation
- one handed operation using ratchet principle
- little handforce required due to very high transmission ratio
- two-stage ratchet drive for easy cutting
- simple handling as a result of light weight and compact design – can be used even in confined areas
- with pinch guard and slip guard
- High-grade special tool steel; forged, oil-hardened

95 36 280
suitable for aluminium sector cable up to 4 x 300 MCM (4 x 150 mm²)

Product Number	↔ inch	↔ mm		Tool	Handles	Cutting capacities Ø inch	Ø mm	mm²	MCM	Ounces

Cable Cutters (ratchet action)

Sturdy. Easy to use. Stable. Innovative ratchet-drive. For cable up to 2 23/64 in diameter.

95 36 320
1000 V

- easy handling due to low weight (28.2 oz.) and compact construction (12 1/2" length) – usable in confined areas also
- cutting through copper and aluminium cables with diameters of up to 2 23/64 in (60 mm) in one handed and two handed
- hardened cutting edges, precisely ground, cut smoothly and neatly without crushing
- for cutting copper and aluminium single conductors as well as multiple stranded cables
- not suitable for cutting ACSR, steel wire and wire ropes
- innovative three-stage ratchet-drive with high leverage for easy cutting in one-hand and two-hand operation
- with one handed and two handed
- fixed handle with support area for putting down the pliers when cutting
- High-grade special tool steel, forged, oil-hardened

Compact Tool Cases with insulated tools 10 parts

IEC 60900 ASTM F1505

- specific assortments to meet the needs of demanding trade professionals
- all tools 100% tested and meet ASTM F1505 and IEC 60900 requirements
- high quality, versatile, shock-resistant plastic case
- foam insert with honeycomb structure for variable equipment
- Dimensions exterior (W x H x D): 17 1/8 x 3 15/16 x 12 25/64"
  Dimensions interior (W x H x D): 16 19/64 x 3 5/32 x 11 39/64"

Universal Tool Case 48 parts

with insulated tools for working on electrical installations

IEC 60900 ASTM F1505

98 99 14
1000 V

98 99 14

- hard-wearing version made of ABS material, red; containing a range of KNIPEX tools for work on electrical installations, tested according to IEC 60900, as well as additional insulating mats, clamps and gloves
- sturdy aluminum frame with D-shape rings for belt and fix, sturdy center board with multi-purpose push-in facilities by elastic loops and 12 small pockets
- comfortable handle and mounting device for a "trolley" embedded in the bottom (available ordering ref. 00 21 40 T)
- metal hinges
- 66 pounds maximum load
- can be opened on one or both sides; bottom tray and cover can be opened independently
- stands stable in any opening position due to lid-holders and hinge mechanisms on both sides that register in a position of 45° and 90°
- 3-digit lock and 2 clamp-locks for fixation of the lid
- removable document compartment and removable tool board, with 13 push-in compartments on one side

KNIPEX TwinKey®

for all standard cabinets and shut-off systems

- multifunctional key for the actuation of locking systems from the areas of facilities engineering (heating and sanitation, air-conditioning, electrotechnology), gas and water supply and shut-off systems
- 8-arm version: two 4-way spider keys connected in a space-saving way using magnets
- reversible bit: slot 3/64 x 9/32" and PH 2 cross slot
- key and reversible bit joined by stable stainless steel wire
- quality surface coating
- weight-optimized zinc die cast design

Pen-Style Control Cabinet Key

for all standard cabinets and shut-off systems

00 11 07

- easy to carry pen-style control cabinet key with fastening clip
- four different key profiles can be utilized by swivelling the key holder
- for control cabinets and shut-off systems in the supply of gas, water and electricity
- for technical installations in buildings, e.g. air conditioning and ventilation systems, shut-off valves, main switch-boards, etc.
- universal 1/4" bit adapter for standard bits (permanent magnet for retaining)
- additional bit adapter for 1/4" bits inside one key profile
- with bit insert: cross recess PH 2 and option of safekeeping a second bit
- tool body: plastic, fiberglass-reinforced
- key profiles: zinc die casting
